REPORT

TO

HIS EXCELLENCY ROBERT OFFLEY ASHBURTON, BARON HOUGHTON,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Thirtieth Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1893 number 21,714; the Births 106,082; and the Deaths 82,821. The marriage rate was slightly above the average for the preceding ten years, the birth rate showed a small decline and the death rate was also under the average.

The recorded natural increase of population, or excess of births over deaths, was 23,261: the loss by emigration amounted to 48,147; there would thus appear to have been a decrease of 24,886 in the population during the year, but against a portion of this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,615,312.

TABLE I.—Showing for each of the years 1883–93, the estimated **Population**; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1883–92.

YEARS.	*Estimated Population in the middle of each year.	Numbers *Registered.*			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.			
		Marriages.	Births.	Deaths.		Marriages.	Births.	Deaths.	Emigrants.

* See page 189.

There are 2,618 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1893, 558 cases of vacancies or appointments were dealt with.

I append a table showing the number of Searches, &c., at the General Register Office since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. It will be observed that the steady increase in the number of searches and in the number of certified copies issued was maintained in 1893.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 30 years 1864–93.

During the financial year ended 31st March last 670 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 190 cases prosecutions were ordered to be instituted against the offenders. In 103 of these the parties were convicted and punished; in 81 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 6 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register Births, neglect to register Deaths, neglect to furnish Certificate of Marriage, failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness previous to death; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish Certificate of Cause of Death; neglect of Registrar to furnish certified copies of entries in his Register Books; burying two bodies in one coffin without due notice.

The administration of the legal work of the office is, as mentioned in previous Reports, entrusted to Mr. Matheson, whose detailed statement of the business transacted will be found at page 194.

MARRIAGES.

I regret to state that in 29 cases returns relating to a portion of the year 1893 have not yet been furnished by the clergy of the Church of Ireland, and in 7 instances by the Presbyterian clergy connected with the General Assembly. The number of marriages celebrated in the majority of these churches is known to have been small, and would not appreciably affect the general statistical results for Ireland, but nevertheless it is unsatisfactory to have to notice even any omissions to comply with Sec. 65 of 7 & 8 Vic., cap. 81, under which these returns are required from the clergy.

The number of Marriages registered during the year is 21,714, being equal to 1 in every 213, or 4·70 per 1,000, of the estimated population,* a rate which is ·06 over that for the previous year, and ·30 above the average for the ten years 1883–92.

Of the 21,714 Marriages registered during the year 1893, 15,092 were between Roman Catholics; 3,546 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,295 were in Presbyterian Meeting-houses; 385 in "Registered Buildings" belonging to various religious denominations; only 375 by civil contract in the Registrars' offices; 11 were according to the usages of the Society of Friends; and 10 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·34 per 1,000 of the estimated number of Roman Catholics, and the other Marriages represent a rate of 5·83 per 1,000 of all persons other than Roman Catholics in the population.

Of the 3,546 Marriages according to the rites of the Church of Ireland, 60 were by special licence, 2,999 by licence, 428 after the publication of banns, 5 on Registrar's certificate, and in 54 instances there was no information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years.

TABLE IV.—**Marriages** registered in Ireland in 1893 and each of the previous ten years, according to the **modes of celebration**; with the **rate** per 1,000 of the population represented:—

During the year 1893 there were issued by the Registrars 698 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1893.	Number of Registered Meeting-houses on 31st December, 1893.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	146	573	2,193
2. Remonstrant Synod of Ulster, ...	8	19	36
3. Presbytery of Antrim, ...	4	7	5
4. United Presbytery or Synod of Munster, ...	2	2	1
5. Northern Presbytery of Antrim, ...	2	5	7
Total, ...	162	606	2,242

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1893, there were 1,489 churches and chapels of the Church of Ireland, 606 registered Presbyterian Meeting-houses, and 369 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 1 as regards the Church of Ireland, an increase of 3 in the number of Presbyterian Meeting-houses, and an increase of 1 "Registered Building."

The following statement shows the several religious bodies having "Registered Buildings" in 1893:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, . . .	217	Moravians, or United Brethren,	8	Covenanters, . . .	1
Reformed Presbyterians, .	37	Methodists, New Connexion,	7	Welsh Presbyterians, . .	1
Independents, . . .	25	Evangelical Union, . .	2	United Original Seceders, .	1
Baptists, . . .	21	"The Catholic Apostolic Church," . . .	2	"Protestant Dissenters," . .	1
Christian Brethren, . .	11	Jews, ...	2	Non-Subscribing Christians, .	1
Salvation Army, . .	10	Non-Subscribing Unitarians,	1	Independent Protestants, . .	1
Seceders, ...	10	Unitarians, . . .	1		
United Presbyterians, .	9			Total, . . .	369

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. In 1893, the numbers recorded were—in the first quarter 6,777; in the second, 5,183; in the third, 4,851; and in the last, 4,903.

The marriages of bachelors and spinsters constitute 86·6 per cent. of the total; those of widowers and spinsters 8·4 per cent.; of bachelors and widows 2·7 per cent.; and of widowers and widows 2·3 per cent. Thus, 10·7 per cent. of the men married were widowers, and 5·0 per cent. of the women were widows; and in 13 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1883–93, and the average number for the ten years 1883–92, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

Year.	Marriages.

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1893 the ages of both parties were specified in 4,569 cases only, being little more than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 21,714 men married during the year, 398, or 1·83 per cent., were minors; and of the women married, 1,783, or 8·21 per cent., were under age. These proportions are considerably below the averages for the preceding ten years.

The highest proportion of husbands (2·09 per cent.) married under age in 1893, was in the province of Ulster, and in that province there was also the highest per-centage of wives (9·03), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. In the year 1893, 17,815, or 82·0 per cent., of the husbands, and 17,947, or 82·7 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures, though still leaving much to be desired, contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1883 who wrote their names being—men 74·9, and women 71·9.

The per-centages for the several provinces last year range, for men, from 75 in Connaught to 85 in Leinster, and, for women, from 79 in Connaught to 87 in Leinster.

In 1,869 cases, both of the parties married signed the register by "mark," and in 3,928 the register was thus signed by either the husband or the wife, so that in 5,797 cases, or 26·7 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 15,917, or 73·3 per cent., *both* parties wrote their names.

The number of marriages registered in each of the eleven years 1883–93; the proportion per cent, of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1883–93, the proportion per cent. of Persons who **signed their Names,** of Persons **not of Full Age,** and of **Re-marriages.** The figures for the years 1883–84 refer to Registration Provinces; those for 1885–93 to the Provinces Proper.

	1893,	75·4	78·8	1·78	8·14	8·65	4·62

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·2 per 1,000 of the population, according to the Census of 1891; Leinster comes next, with 5·1 per 1,000; Munster third, with 4·1 per 1,000; and Connaught last, the rate being 3·3 per 1,000.

The highest rate for any county was 7·6 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·0 per 1,000, for Galway. Between these, the most favourable were 7·1 for Dublin, and 5·2 for Wicklow; and the least so 3·1 for Mayo and Clare, and 3·3 for Kerry.

BIRTHS.

The number of births registered during the year 1893 was 106,082—54,323 boys and 51,759 girls, or 105·0 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·5, or 23·0 per thousand, which is 0·1 under the low average rate per 1,000 for the ten years, 1883–92.

Of the 106,082 children whose births were registered in Ireland during the year 1893, 103,326, or 97·4 per cent. were legitimate, and 2,756, or 2·6 per cent., were illegitimate: the average per-centage of illegitimate for the preceding 10 years was 2·7. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 52,925 were males, and 50,401 females, being 105·0 of the former to every 100 of the latter, and of the illegitimate children 1,398 were males, and 1,358 females, or 103·0 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·7; in Leinster, 2·5; in Munster, 2·2; and in Connaught, 0·7.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1889–93, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1889.	1890.	1891.	1892.	1893.	1889.	1890.	1891.	1892.	1893.
IRELAND, . . .	97·2	97·3	97·3	97·5	97·4	2·8	2·7	2·7	2·5	2·6
LEINSTER, . . .	97·5	97·5	97·6	97·8	97·5	2·5	2·5	2·4	2·2	2·5
MUNSTER, . . .	97·8	97·8	97·8	98·0	97·8	2·2	2·2	2·2	2·0	2·2
ULSTER, . . .	95·6	96·0	96·0	96·1	96·3	4·4	4·0	4·0	3·9	3·7
CONNAUGHT, . . .	99·3	99·2	99·3	99·5	99·3	0·7	0·8	0·7	0·5	0·7

The respective total birth-rates for the provinces in 1893 were—Leinster, 22·6 per 1,000 of the population in 1891; Munster, 21·7; Ulster, 23·8; and Connaught, 21·0.

The four counties having the highest rates are Antrim, 29·4 per 1,000 of the population in 1891; Down, 27·8; Dublin, 27·5; and Kerry, 22·9. Those with the lowest rates are—Monaghan, 17·4; Meath, 18·1; Cavan, 18·7; and Tyrone, 18·9.

Of the total births, 52·3 per cent. were registered in the first six months of the year (181 days), and 47·7 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 27,204 ; in the second, 28,320 ; in the third, 26,098 ; and in the fourth, 24,460.

DEATHS.

The deaths registered during the year amount to 82,821, being equal to 1 in 55·7 or 17·9 per 1,000 of the estimated population. The deaths of males number 40,788, and those of females 42,033, the former being equal to 17·9 in every 1,000 males living, and the latter representing 18·0 per 1,000 females.

The death-rate (17·9) is 0·3 under the average rate for the preceding ten years, and 1·5 under the rate for the year 1892.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 13·3 ; that for Munster is 16·6 ; for Ulster, 18·3 ; and for Leinster, 20·3 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Sligo, 11·6 per 1,000 ; Leitrim, 13·0 ; Mayo, 13·0 ; and Cavan, 13·5.

Those in which the rate was highest are—Dublin, 25·2; Antrim, 22·8; Waterford, 20·5 ; and Carlow, 20·2.

The deaths registered in the first half of the year generally outnumber those in the second. In 1893, 52·0 per cent. of the total deaths were registered in the six months, January to June inclusive, and 48·0 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 19·7 per 1,000 of the population ; second, 17·6 ; third, 15·5 ; and fourth, 19·0.

From the Table on pp. 172–181 *it will be seen that, of the* 82,821 *deaths registered during the year,* 2,302 *took place in Infirmaries and General and Special Hospitals ;* 1,081 *in Public Lunatic Asylums;* 9,339 *in Workhouses and Workhouse Hospitals; and* 70,099 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 182–3) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 2·8 per cent. of the total number, the per-centages for the four provinces varying from 0·3 in Connaught to 7·0 in Leinster. Over eleven per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 13·1 ; Munster, 16·6 ; Ulster, 7·2 ; and Connaught, 8·8.

TABLE VIII.—Showing, by **Quarterly Periods**, the number of **Births** and **Deaths** registered in Ireland in each of the eleven years, 1883–93, and the average number for the ten years, 1883–92.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1893 was 8,944 (4,276 males and 4,668 females), or 194 in every 100,000 of the estimated population, being 1,029 under the number for the preceding year, but 899 above the average for the ten years, 1883-92.

Of the 8,944 deaths from zymotic diseases 4,886, or 54·6 per cent., were amongst children under 10 years of age.

DEATH.

each of the Principal Causes registered in Ireland during each of the eleven years 1883–93, Rates per 100,000 of the estimated Population represented by those numbers.

Small-pox.—One death from small-pox was registered during the year. In 1892 no deaths from this disease were registered, in 1891 it caused 7 deaths, but in the two

* The rates are based on the population according to the Census; the rates for the years 1885–6 being founded on the 1881 population, and those for the years 1887–93 on the population by the Census of 1891.

years preceding no fatal cases of it were recorded. The average annual number for the ten years 1883–92, was 5 only, so that in late years deaths from Small-pox have been of very rare occurrence in Ireland.

Measles.—Deaths from Measles, which in 1891 fell as low as 240, in 1892 amounted to 1,183, and were last year 1,082, or 189 in excess of the average for the ten years, 1883–92. The deaths from this disease in Belfast Union number 226, and those in the two Metropolitan Unions of Dublin North and Dublin South 101; in Limerick Union there were 52 fatal cases, and in Waterford Union 55, so that the deaths in these four Unions amounted to 434, or 40 per cent. of the number for the whole country. The total number for the province of Leinster is 307, for Munster 329, for Ulster 416, and for Connaught 30.

Scarlet Fever.—Deaths from Scarlet Fever, although more numerous than in any of the three years preceding, were far below the average for the ten years 1883-92, the number being 457 as compared with an average of 846. Of the 457 deaths registered last year, 114 occurred in Leinster, 32 in Munster, 197 in Ulster (of which 53 were in Belfast Union), and 114 in Connaught, the last number including 24 in Castlereagh Union, where 55 deaths from this disease were registered in the year 1892.

Diphtheria.—There were 411 deaths from diphtheria registered, being 125 over the number for the preceding year, and 79 in excess of the average for the ten years 1883–92. The 411 deaths consist of 79 in Leinster (including 24 in South Dublin Union), 54 in Munster, 247 in Ulster (including 22 in Ballymena Union, 52 in Belfast Union, 26 in Londonderry Union, and 22 in Strabane Union), and 31 in Connaught. In Ulster the rate represented by deaths from diphtheria was 15·2 per 100,000 of the population.

Whooping-cough.—Deaths from this disease, which had fallen from 1,280 in 1891, to 1,154 in 1892, were last year 1,169, or 25·3 per 100,000 of the population, being 4·8 under the average rate for the ten years 1883–92. The 1,169 deaths in 1893 were distributed as follows:—386 in Leinster (including 86 in the North, and 95 in the South Dublin Union, 49 in New Ross Union, and 33 in Rathdown Union), 228 in Munster, 464 in Ulster (of which 223 were in Belfast Union, and 27 in Strabane Union), and 91 in Connaught. The respective rates for the four provinces were—Leinster, 32·5 per 100,000 of the population; Munster, 19·4; Ulster, 28·6; and Connaught, 12·6.

Fever.—The total number of deaths from the several forms of continued fever was 1,285, being 93 over the number for the preceding year, but 303 below the average for the ten years 1883–92. The rate represented by the deaths for last year was 27·8 per 100,000 of the population, against an average of 32·7 for the preceding ten years. The deaths from "fever" in Leinster were equal to 39·6 per 100,000 of the population according to the Census of 1891; in Munster the rate was 27·2 per 100,000; in Ulster, 22·5; and in Connaught, 18·2.

The 1,285 deaths from "fever" consist of 227 from typhus (being 41 under the number for 1892, and 212, or 48 per cent. below the average for the ten years 1883–92), 919 from enteric fever, (being 205 over the number for 1892, 128 over the average for the ten years, and higher than the number in any of those years except 1889, when 968 deaths were recorded), and 139 from simple continued and ill-defined fever, being 219 below the average number under that heading in the preceding ten years. It will be observed from Table X., page 12, that as regards the distribution of the deaths through the four provinces, the highest rates for typhus were in Munster and Connaught, and the highest for enteric fever in Leinster and Ulster. The deaths from enteric fever in Dublin and Belfast form about 44 per cent. of the total number for Ireland; the disease was more fatal in the former city in 1893 than it had been during any of the three years preceding, but the mortality in Belfast, although higher than in 1892, is under that in the years 1890 and 1891. The respective numbers for Belfast Union were 190 deaths in 1890, 156 in 1891, 115 in 1892, and 131 in 1893, and for the two Unions of Dublin North and Dublin South, 168 in 1890, 185 in 1891, 132 in 1892, and 283 in 1893.

In proportion to the living at the same age, "fever" was most fatal at the age-periods 20 and under 25 years, and 25 and under 35, for the former of which the rate was 44·93 per 100,000, and for the latter 40·37, and least so amongst persons aged 75 and upwards, the rate being 8·24 per 100,000.

Erysipelas.—The number of deaths from erysipelas is 310, being 140 over the number for the preceding year, and 90 over the average for the ten years 1883–92.

Puerperal Fever.—The number of deaths from this disease is 384, being 84 over the average for the preceding ten years, and 109 over the number for the year 1892.

Influenza.—For the ten years 1864–73 (during the greater portion of which period there was not any epidemic outbreak of the disease), the average annual number of deaths from influenza registered in Ireland was 166, or 0·3 per 10,000 of the population, the yearly number ranging from 311 in 1864 to 96 in 1868; for the following ten years (1874–83) the average number was 82, the highest being 124 in 1875, and the lowest 39 in 1882; and for the six years, 1884–9, the average was 34 only, the numbers varying from 21 to 44. In 1890 the deaths from the disease amounted to 1,712, or 3·6 per 10,000 of the population; in the following year they fell to 891, or 1·9 in every 10,000 living; in the year 1892 they rose to 3,742, or 8·1 in every 10,000 of the population, and equal to 4·2 per cent. of the deaths from all causes, and last year they fell to 1,310, or 2·8 in every 10,000 of the population. In the province of Leinster the influenza death-rate in 1893 was 3·2 per 10,000 of the population; in Munster, 3·3; in Ulster, 2·5; and in Connaught, 1·9. The county rates range from 0·3 per 10,000 in Fermanagh County to 7·7 in Queen's County.

The Table (XII.) on the opposite page shows, by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

[TABLE.

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1893, with the rate per 10,000 of the population represented by the deaths at all ages.

Diarrhœa and Dysentery.—The mortality from these diseases was considerably over the average, the number of deaths being 1,967, or 42·6 per 100,000 living, against an average of 1,383, or 28·6 per 100,000 for the ten years 1883-92. The number of deaths from these diseases in 1892 was 1,186.

The rate for Leinster in 1893 was 51·2 per 100,000 of the population; for Munster, 28·3; for Ulster, 57·7; and for Connaught, 12·8. Of the 608 deaths from diarrhœa and dysentery in the province of Leinster, 421 occurred in one or other of the two Unions of Dublin North, and Dublin South; and of the 934 deaths in Ulster, 547 were registered in Belfast Union.

Simple Cholera.—Two hundred and forty deaths were ascribed to this disease, the average for the previous ten years being 52. Of those recorded in 1893, 47 were in Leinster, 41 in Munster, 149 in Ulster (including 114 in Belfast Union), and 3 in Connaught.

Four males and 1 female died from *Hydrophobia.*

II.—Parasitic Diseases.

There were only 38 deaths from diseases of this class.

III.—Dietetic Diseases.

The deaths from dietetic diseases number 164; they comprise 155 from intemperance, 44 of which (42 males and 2 females) were caused by delirium tremens, and 111 (92 males and 19 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the preceding year, also, was 155.

IV.—Constitutional Diseases.

From diseases termed "constitutional" there resulted 15,980 deaths (7,579 males and 8,401 females), affording a rate of 1 in 5·2 of all the deaths, and equal to 346 in every 100,000 of the population.

Phthisis or Pulmonary Consumption caused 9,869 deaths (4,666 males and 5,203 females), being equal to 213·8 in every 100,000 persons, against an average annual rate of 213·3 per 100,000 for the previous ten years.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 236 per 100,000 of the population; Ulster, 229; Munster, 196; and Connaught, 147.

Of the 3,711 deaths from phthisis in Ulster, 1,102 occurred in Belfast union, the number being equal to 380 per 100,000 of the population according to the Census of 1891, and the 2,801 fatal cases of the disease in Leinster comprise 1,296, or 371 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,394, or 75 per cent., were of persons aged 15 and under 45 years of age.

Mesenteric Disease.—The deaths from mesenteric disease number 971—483 males and 488 females.

Gout.—Only 32 deaths from gout were registered (19 males and 13 females).

Cancer.—There were 2,280 deaths (1,052 males and 1,228 females) tabulated under this heading, against an average of 2,063 for the ten years 1883-92.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1893, arranged according to the part of the body affected by the disease, in so far as that information was contained in the Returns; also the number of deaths to 100,000 of the living at same age. In 81 instances the organ or portion of the body affected was not stated. It will be observed from the Table that the deaths entered under the first ten headings therein, which relate to various parts of the head, neck, and throat, amount to 475, and that of these, 337, or more than two-thirds, were deaths of males; 553 of the classified cases were deaths from cancer of the stomach; 242 females died from cancer of the breast, and 166 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1883-92, arranged by Age-periods.

* Including 8, pancreas; 7, nose; 6, ovary; 4, spleen.

V.—Developmental Diseases.

The deaths in this class amount to 16,584, of which 16,119 (7,195 males and 8,924 females), or 19·5 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 465 deaths, 358 are tabulated under the head of "premature birth"; 29 were caused by atelectasis, 13 by cyanosis, 49 by spina bifida; &c.

VI.—Local Diseases.

The number of deaths from "local diseases" registered amounted to 33,816 (17,390 males and 16,426 females), or 40·8 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 7,359 deaths—3,923 males and 3,436 females. They include 2,429 from convulsions (nearly all children), 1,393 tabulated under the head of "hemiplegia, brain paralysis"; 1,212 from apoplexy; 746 from inflammation of the brain or its membranes, 315 from epilepsy, 404 from insanity (general paralysis of the insane), 11 (5 males and 6 females) from chorea or St. Vitus's dance, 203 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 5,946 deaths—3,005 males and 2,941 females.

*Diseases of the Respiratory System.**—The number of deaths from these diseases is 13,714—7,063 males and 6,651 females—or 297·1 in every 100,000 of the population. In the preceding year 15,830 deaths from these causes were registered, and the average number for the ten years 1883–92 was 15,301 or 316·7 per 100,000 of the estimated mean population. The respective rates for the Provinces, in 1893, are Leinster, 321 per 100,000 persons; Munster, 303; Ulster, 298; and Connaught, 209.

Of the 13,714 deaths from these causes 8,543 (4,000 males and 4,543 females), resulted from bronchitis, being 1,890 under the number from that disease in the preceding year; 3,283 (2,114 males and 1,169 females) were from pneumonia or inflammation of the lungs; 604 from croup; 269 from asthma and emphysema; 218 from pleurisy; 104 from laryngitis, &c.

Diseases of the Digestive System.—These diseases caused 4,172 deaths (2,111 males and 2,061 females), including 413 from enteritis or inflammation of the bowels; 449 from peritonitis or inflammation of the covering of the bowels; 343 from ileus or obstruction of the bowels; 164 from hernia; 3 (1 male and 2 females) from fistula; 253—163 males and 90 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,384 deaths (921 males and 463 females) were ascribed. Of these deaths, 596 (357 males and 239 females) were from Bright's disease, 197 from acute nephritis or inflammation of the kidneys; 18 from ischuria or suppression of urine; 21 from stone in the bladder; 33 from uræmia, &c.

The remaining deaths from Local Diseases comprise 57 from *Diseases of the Lymphatic System and of Ductless Glands*; 578 from *Diseases of the Reproductive System* (including 158 from diseases of the Organs of Generation, and 420 from the Accidents of Childbirth), 303 from *Diseases of the Organs of Locomotion;* and 244 from *Diseases of the Integumentary System.*

VII.—Violent Deaths.

The number of violent deaths registered during the year is 1,855 (1,290 males and 565 females), or 40·2 in every 100,000 of the population, being slightly over the average rate for the ten years 1883–92. Accidents or negligence caused 1,660 of these deaths (including 337 from burns or scalds and 319 from drowning); there were 63 cases of homicide (murder and manslaughter), and 129 of suicide, and 3 men were executed.

Inquests.—There were 2,171 inquests reported to the Registrars during the year 1893, being 1 inquest to every 38 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 10,830, being equal to 10·2 per cent. of the number of births registered.

Amongst children under 5 years of age 17,496 deaths occurred—a mortality equal to 38·0 in every 1,000 of the estimated number of the living at that age. Of these, 9,349 were boys and 8,147 girls; the former number representing 40·0 in every 1,000 boys, and the latter 35·9 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

The deaths of persons aged 65 years and upwards are equivalent to 9·3 per cent. of the living at that age.

Among the deaths registered are 611 of persons stated to have been aged 95 years or upwards—295 males and 316 females; of these 144 (66 males and 78 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during the year 1890 as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland), who left Ireland during the year 1893 amounted to 48,147; of these 23,044 were males and 25,103 were females. Of the whole number, 6,322 were from the Province of Leinster; 19,820 from Munster; 10,525 from Ulster; and 11,480 from Connaught.

Of the total emigrants from Ireland in 1893, 8·0 per cent. were under 15 years of age; 85·0 per cent. were between 15 and 35 years old; 7·0 per cent. were 35 or upwards; and in 16 instances, the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin in the year 1893 was 5¾*d.*, being ½*d.* under the average price for the previous year.* Oatmeal (1st quality) averaged 15*s.* 1*d.* per cwt. in Dublin: the average price for 1892 was 15*s.* 5*d.*; the average prices of potatoes in Dublin ranged from 2*s.* 4*d.* to 3*s.* 3*d.* per cwt., against 2*s.* 2*d.* to 2*s.* 11*d.* in 1892; and those of beef from 44*s.* to 57*s.* per cwt., against 46*s.* to 58*s.* in 1892.

Table XIV.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef, during the years 1883–93, and the Average Number of Persons in Ireland receiving In-Door and Out-door Relief on Saturdays in those years; also the Average Prices of Provisions and the Average Number of Persons in Receipt of Relief during each quarter of the year 1893.

* Prices for the years 1883–7, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Manders & Co., those for the third and fourth quarters of 1888 and for the years 1889–93 from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by the several Tables in this Report, *i.e.*, 1893, and the ten years preceding, it is found that beef was lowest in the year 1887, when the average prices ranged from 44*s.* to 53*s.* 6*d.* per cwt.; oatmeal (1st quality), was cheapest in 1889, when the average price was 13*s.* 7*d.* per cwt.; and potatoes, in 1888, when the average range of prices was from 2*s.* 2*d.* to 2*s.* 9*d.* per cwt. The highest average price of oatmeal was 17*s.* 6*d.* in 1884 and 1885; the highest range for potatoes, 3*s.* 9*d.* to 4*s.* 10*d.* per cwt. in 1883, and for beef, 66*s.* 6*d.* to 77*s.* per cwt. in 1883.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1893 was 41,836, being 254 over the average for the preceding year; and that the average number of persons receiving out-door relief was 57,901, or 1,833 under the corresponding number for 1892.

THE WEATHER.

The following particulars and those given on pages 22–44 and pages 184–5, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City during the years 1873–93, by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.; and published in the Journal during the years 1893–94. The Tables on pages 186–8 also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (·01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1893 was 29·954 inches. The highest observed reading was 30·706 inches at 9 A.M. on December 30th. The lowest observed reading was 28·530 inches, at noon on December 10th. The extreme range of atmospherical pressure was 2·176 inches compared with 1·804 inches in 1892.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 51·5°. The highest reading was 79·8° on August 15th; the lowest reading was 20·2° on January 3rd. The average mean temperature for the years 1873–92 calculated in the same way, was 48·5°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50·5°.

Rain fell on 174 days, including snow or sleet on 17 days, and hail on 21 days. The average number of rainy days in the years 1873–92 was 197·1. The total rainfall measured 20·493 inches compared with an average of 27·929 inches in the twenty years 1873–92. During the first half of 1893 (January to June, inclusive) the rainfall was 9·624 inches on 78 days; during the second half (July to December, inclusive) 10·869 inches fell on 96 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 50; N.E., 50; E., 86; S.E., 47; S., 50; S.W., 99; W., 215; N.W., 96; Calms, 37.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

General Register Office,
Charlemont House,
Dublin, 17th September, 1894.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1893.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—The promise of a cold month offered by very severe weather during the first ten days or a fortnight was not fulfilled. So decided was the recovery of temperature after the 15th, that the mean temperature of the whole month scarcely fell below the average. The mean temperature of the 1st-14th, inclusive, was 36·0°; that of the 15th-28th, inclusive, was 44·3°. Ireland escaped to a remarkable extent, the Siberian cold which prevailed on the Continent of Europe, and to a less degree in Great Britain throughout a large portion of the month. In Dublin the cloudiness of the sky was one of the chief features of the weather. Another interesting point was the singular mildness, which the northerly and north-westerly winds of an Atlantic anticyclone brought to Ireland in the period between the 15th and the 25th.

In Dublin the arithmetical mean temperature (40·8°) was slightly below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 40·1°. In the twenty-eight years ending with 1892, January was coldest in 1881 (M. T.=32·2°), and warmest in 1875 (M. T.=46·6°). In 1867 the M. T. was 35·7°, and in 1865 it was 37·8°. In 1871 and in 1886 the M. T. was 37·9°; in 1879 (the "cold year") it was 35·3°. In 1888 the M. T. was 42·1°; in 1889, 42·4°; in 1890, 44·5°; in 1891, 40·1°; and in 1892, 38·8°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the north-westward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1892, proved an exception to this rule, the M. T. being 4·2° below that of December, 1891 (43·0°). But January, 1893, conformed to the rule, the M. T. being above that of December, 1892.

The mean height of the barometer was 30·053 inches, or 0·179 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·559 inches at 7 30 a.m. of the 21st, and fell to 29·178 inches at 9 p.m. of the 28th. The observed range of atmospherical pressure was, therefore, as much as 1·381 inches—that is, a little less than one inch and four-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 40·1°, or 1·2° above the value for December, 1892. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·52), the M. T. becomes 41·0°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 40·8°, compared with a twenty-five years' average of 41·4°. On the 30th the thermometer in the screen rose to 54·9°—wind, W.S.W.; on the 3rd the temperature fell to 20·2°—wind, W.N.W. The minimum on the grass was 14·4°, also on the 3rd.

The rainfall was 2·239 inches, distributed over 19 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, was very slightly above the average, while the number of rainy days was more decidedly above it. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also, 4·258 inches fell—on, however, only 18 days. On the other hand, in 1876, only ·406 of an inch was measured on but 9 days; and in 1880, the rainfall was only ·563 of an inch on but 8 days. In January, 1886, only 3·244 inches of rain were measured on as many as 26 days; in 1887 ("the dry year"), 1·816 inches fell on 16 days; in 1888, 1·247 inches on 9 days; in 1889, 2·213 inches on 16 days; in 1890, 2·975 inches on 21 days; in 1891, only ·672 of an inch on 14 days, and in 1892, 1·698 inches on 20 days.

Solar halos were seen on the 15th and 25th. A Lunar halo was seen on the 28th. The atmosphere was foggy on the 2nd, 4th, 12th and 29th. High winds were noted on not less than 18 days, reaching the force of a gale, however, on only 4 days—the 7th, 8th, 16th, and 28th. Hail fell on the 3rd, 7th, 14th, and 31st, and snow or sleet on the 1st, 2nd, 7th, and 14th. Temperature exceeded 50° in the screen on 7 days, compared with 6 days in 1892, only 5 days in 1891, 17 days in 1890, and 8 days in 1889; while it fell to or below 32° in the screen on only 4 nights, compared with 15 nights in 1892, 7 nights in 1891, and 1 night in 1890, and 3 nights in 1889. The minima on the grass were 32°, or less, on 16 nights, compared with 25 nights in 1892, 21 nights in 1891, 15 nights in 1890, and 16 nights in 1889.

The first week of 1893 will long be remembered for the intensity of the cold which prevailed in both Northern Hemispheres, and for the remarkable height reached by the barometer in Northern and Eastern Europe—31·25 inches at Archangel on Tuesday, the 3rd, 31·12 inches at Haparanda, on the Gulf of Bothnia, on Wednesday, and 31·27 inches at Moscow on Thursday. At 8 a.m. of Sunday, the 1st, the thermometer stood at *minus* 37° Fahr. at Haparanda, or 69° below freezing point. During the ensuing night the minimal reading at this station was —40°, or 72° of frost. At the beginning of the month a vast anticyclone stretched from the extreme North of Europe to the westward of the British Islands. Strong S.E. winds blew in Ireland, and on Monday morning a fall of snow occurred in Dublin. This was followed by severe frost, the thermometer falling to 20·2° in the screen, and to 14·4° on the ground during Monday night, even in the heart of the city. On Wednesday the 4th, a decided change of weather set in over Ireland, where the sky became densely overcast, with freshening S.E. winds and rising temperature. In Great Britain at this time the frost only "stiffened," and fog prevailed. By the end of the week, however, strong S.E. or E. winds, with falls of cold rain and sleet or snow had become general, and the weather was most inclement in all parts. In Dublin the mean height of the barometer was 30·110 inches, pressure

ranging from 30·369 inches, at 9 a.m. of Wednesday (wind calm), to 29·763 inches at 9 p.m. of Saturday (wind, E., blowing a moderate gale). The corrected mean temperature was 33·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 32·5°. The screened thermometers rose to 38·9° on Friday, having fallen to 20·2° on Tuesday. The rainfall amounted to ·624 inch on five days, ·372 inch being registered on Saturday. The precipitation consisted largely of snow or sleet and hail. The prevalent wind was S.E. A noteworthy feature was the relatively high temperature which accompanied this wind in the south-western parts of England and Ireland, and in Brittany.

Although the cold in Ireland and in Great Britain also was much less intense during the week ended Saturday, the 14th, than in the two previous weeks, the record is again one of winterly weather. At the beginning of the period a large area of low atmospherical pressure was found over the Atlantic south-westward of the British Isles. Strong E. and S.E. winds or gales were blowing in Ireland, where also cold rain or sleet fell heavily. During the next two days the depression made its way across the Bay of Biscay and France to Germany, bringing with it to those countries higher temperatures and a thaw. Meanwhile an area of high pressure formed in the far North, causing easterly to northerly winds, and cloudy, cold weather generally. This system subsequently retreated in a south-westerly direction, and disappeared off the S.W. of Ireland on Friday, when a series of depressions was preparing to travel southwards across the British Isles and North Sea. In front of these disturbances a transitory rise of temperature took place on Friday, and rain fell at night. On Saturday, however, rain gave place to frequent showers of sleet, snow, and hail, as the wind veered to N. and N.E. in the rear of the depressions, which continued their southerly course. In Dublin the mean height of the barometer was 30·090 inches, pressure ranging from 29·616 inches, at 2 p.m. of Sunday (wind, E), to 30·440 inches, at 9 a.m. of Wednesday (wind, E.N.E.). From this high reading it receded to 29·764 inches, at 9 a.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 38·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 38·3°. On Friday the screened thermometers rose to 44·4°; on Saturday they fell to 33·0°. The rainfall was ·368 inch on four days, ·228 inch being measured on Sunday. The prevailing winds were— first easterly, then north-westerly.

The most marked characteristic feature in the weather of the week ended Saturday, the 21st, was a decided advance in temperature all over the British Islands, but especially in Ireland, Scotland, and the West of England (including Wales). In France and Germany, on the contrary, the cold "stiffened" daily until Friday, when warmer weather spread in from the Atlantic over the Continent also. A very interesting circumstance is that the milder weather came with N.W. and N. winds, which formed part of the circulation round an anticyclone found generally over the Atlantic to the westward or south-westward of Ireland. On Tuesday morning also a *southerly* wind carried cold weather from the frozen Continent to the S.E. of England, where the thermometer remained all day below the freezing point. Not for many years has such extreme cold been felt in Germany and France as during the greater part of this week—at Munich the minima have been—11°,—15°,—14°,—8°,—8°, +1°, and + 19°; at Lyons the corresponding values have been+11°,—3°,—1°, (?), 0°, + 3°, +4° (?), and + 17°. During all this time temperatures as high as from 48° to 52° were being recorded on the Atlantic coasts of both the United Kingdom and France. In the interval between Wednesday and Friday a vast depression crossed the extreme northern parts of Scandinavia, bringing with it a thaw even to those high latitudes at a time when intense frost held as far south as Lyons and Munich. On Saturday cold weather was re-established in Scotland and Scandinavia. In Dublin the mean height of the barometer was 30·286 inches, pressure ranging from 29·816 inches at 2 p.m. of Monday (wind, N.W.) to 30·559 inches at 7.30 a.m. of Saturday, (wind, W.N.W.). The corrected mean temperature was 42·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 42·4°. On Sunday the thermometers in the screen fell to 29·5°; on Thursday they rose to 50·8°. Rain was measured on four days to the amount of ·341 inch, of which ·277 inch fell on Sunday. The prevailing winds were W.N.W. and W.

A further advance in temperature occurred during the week ended Saturday, the 28th, which proved open, changeable, and breezy, with prevalent westerly to southerly winds. At first an anticyclone lay to the southward of Ireland—on the morning of Sunday, the 22nd, the barometer stood as high as 30·60 inches at Corunna, in the N.W. of Spain—while several shallow depressions were found over the North Sea, Germany, and the Baltic. The winds curved from S.W. in the west of Ireland, through W. in the east of this country to N.W. in the S.E. of England, and to N. in parts of France. The weather was mild and damp, and light rain fell at many stations. On Wednesday morning a depression appeared off the south of Ireland, ultimately forming portion of a complex V-shaped depression, which caused southerly gales, and in places heavy rains during the ensuing 24 hours. As this disturbance passed off to the northward a sharp but temporary dip in temperature took place. On Friday another and more serious depression advanced over Ireland from S.S.W., bringing with it southerly gales, a renewed rainfall, and generally broken weather, which lasted to the close of the week. In Dublin the mean height of the barometer was 29·914 inches, pressure ranging from 30·412 inches, at 9 a.m. of Sunday (wind, W.), to 29·178 inches, at 9 p.m. of Saturday (wind, S.). The corrected mean temperature was 45·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 44·4°. On Tuesday the screened thermometers rose to 53·0°; on Friday they fell to 37·4°. The rainfall was ·389 inch on five days, ·124 inch being measured on Friday, and ·240 inch on Saturday. The prevailing winds were W. and S. to S.S.E. A lunar halo was visible at 9 p.m. of Saturday.

Sunday, the 29th, was a fine mild day. The 30th was very mild, but changeable. On the 31st the heaviest rainfall of the month occurred at night, and hail fell in places in the afternoon.

In Dublin, the rainfall up to January 31, 1893, amounted to 2·239 inches on 19 days, compared with a twenty-five years' (1865–1889) average of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, 3·380 inches of rain fell on 18 days. The heaviest falls in 24 hours were ·510 inch on the 7th, and ·575 inch on the 28th.

The rainfall in January at Cloneevin, Killiney, Co. Dublin, amounted to 2·93 inches, on 19 days. The average rainfall for January at this station is 1·75 inches on 15·5 days. Both rainfall and rainy days were, therefore, considerably in excess this year. The greatest rainfall in 24 hours was ·52 of an inch on the 28th.

FEBRUARY.—The month now under review was, like February, 1892, wet, cold, stormy, and cloudy. Rain or snow fell in measurable quantity on 22 out of 28 days, and on 4 days the wind reached the force of a gale in Dublin. On the 9th, 14th, 21st, and 26th, atmospherical depressions with minima much below 29 inches were found crossing the British Islands. On the 21st and 26th the centres passed over the south of England.

In Dublin the mean temperature (42·7°) was 0·1° below the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 41·7°. In the twenty-eight years ending with 1892, February was coldest in 1873 (M.T.=37·9°), and warmest in 1869 (M.T.=46·7°). In 1886 the M.T. was 39·7°. In the year 1879 (the "cold year") it was 40·1°. In 1888 it was as low as 38·6°; in 1889 it was 40·3; in 1890 it was 41·5°; in 1891 it was as high as 44·7°; and in 1892 it was 41·3°.

The mean height of the barometer was 29·604 inches, or 0·251 inch below the average value for February—namely, 29·855 inches, and ·794 inch below the mean pressure in February, 1891. The mercury rose to 30·218 inches at 9 p.m. of the 4th, and fell to 28·790 inches at 7.30 a.m. of the 14th. The observed range of atmospherical pressure was, therefore, 1·428 inches—that is, a little less than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 41·7°, or 1·6° above the value for January, 1893. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·50), the M.T. becomes 42·7°, compared with a twenty-five years' average of 42·8°. On the 18th the thermometer in the screen rose to 56·4°—wind, S.W.; on the 25th the temperature fell to 26·0—wind, W.S.W. The minimum on the grass was 23·0°, on the 28th.

The rainfall was 2·669 inches, distributed over 22 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was decidedly above the average, while the rainy days were also much above it. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1873, only ·925 of an inch was measured on but 8 days; in 1890, only ·802 of an inch fell on but 7 days; and in 1887 only ·541 of an inch fell on 11 days. The rainfall in 1887 was much the smallest record in February for very many years. But the record for 1891 is probably unparalleled—·042 inch on 2 days. The nearest approach to this drought was in September, 1865, when only ·056 of an inch of rain was measured on but 3 days. In 1892, the rainfall was 2·119 inches, on 19 days.

There was no snow, sleet, or hail in Dublin in February, 1891, but in the present month snow or sleet fell on 7 days—the 11th, 12th, 22nd, 23rd, 24th, 25th, and 26th; while hail was observed on 6 days—the 7th, 20th, 21st, 22nd, 23rd, and 25th.

The atmosphere was foggy on 3 days—namely, the 26th, 27th, and 28th. The amount of cloud —68·2 per cent.—was in excess of the average—66 per cent. High winds were noted on 11 days, reaching the force of a gale on 4 occasions—namely, the 7th, 9th, 10th, and 14th.

The temperature reached or exceeded 50° in the screen on 13 days, compared with 6 days in 1892, and as many as 14 days in 1891; while it fell to or below 32° in the screen on 5 days, compared with 5 days in 1892, and with 2 days in 1891. The minima on the grass were 32°, or less, on 13 nights, compared with 16 nights in 1892, and 17 nights in 1891. On 3 days the thermometer failed to rise to or above 40° in the screen.

Lightning was seen on the night of the 7th. There was an aurora on the night of the 16th. Solar halos were seen on the 15th and 28th, a lunar halo was seen on the evening of the 28th.

During the first four days of the month open but changeable and often rainy weather prevailed in the British Islands. At first it was mild also in France and Germany, but intense frost prevailed in the Gulf of Bothnia, whence a high pressure system with its accompanying cold spread southwards and westwards from Northern over Western Europe before the close of the period. On the night of Wednesday, the 1st, thunder and lightning occurred at Belmullet, Co. Mayo, and rain fell heavily at many Irish stations—·440 inch in Dublin and ·480 inch in the Phœnix Park. As the cold spread from the Baltic over Norway in one direction, and to Denmark, Germany, and England in another, the weather became finer and drier. In Dublin, the 3rd and 4th were quite spring-like days.

During the week ended Saturday, the 11th, open but blustering, rainy, and generally unsettled weather prevailed in Western Europe. At the beginning, no doubt, it was cold in England, very cold on the continent, owing to the presence of an anticyclone in those parts; but even at that time mild southerly winds swept over Ireland and Scotland, keeping the thermometer well above freezing point. On Sunday night the shade thermometer fell to 26° at Loughborough, 24° in London, and 21° at Cambridge. At 8 a.m. of Tuesday temperature exceeded 40° at all British Stations, and touched 50° at Valentia Island, in Kerry. A series of depressions, each deeper than its predecessor, now began to approach the N.W. of Europe from the Atlantic. They caused S.W. to W. gales of considerable violence. and frequent and sometimes heavy rains. On Tuesday night severe squalls, with thunder and lightning, hail and rain, occurred over Ireland. The most serious disturbance of the week however, came in on Thursday afternoon. Its centre lay between the N.E. of Scotland and the S.W. of Norway on Friday morning—the barometer falling below 28·70 inches over that portion of the North Sea. Sleet and snow fell in Scotland, hail in Ireland, and thunder and lightning were again reported from several stations. On Saturday a general reduction of temperature took place, and cold rain and sleet fell in the afternoon. Very intense frost prevailed in the Baltic, over Finland and the North of Russia, all through this week—at Haparanda, on the Gulf of Bothnia, the 8 a.m. readings of the thermometer were + 1°, + 3°, −1°, −6°, −35°, −37°, and

−19° respectively. In Dublin the mean height of the barometer was 29·828 inches, pressure ranging between 30·205 inches at 9 a.m. of Sunday (wind, S.S.E.) and 29·346 inches at 9 p.m. of Thursday (wind, W.). The corrected mean temperature was 46·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 44·8°. On Monday and Tuesday the shade thermometer rose to 53·8°, falling on Saturday to 35·9°. The rainfall equalled ·762 inch on six days—·480 inch being measured on Thursday. The prevailing winds were—first, S., then W. Lightning was seen on Tuesday night, and sleet fell on Saturday.

The striking features in the meteorological conditions during the week ended Saturday, the 18th, were—first, the persistence of severe cold in the north of Europe (Scandinavia, Finland, and Northern Russia); second, the very disturbed state of the atmosphere over the North Atlantic to the west and north of the British Islands—four definite barometrical depressions of prime importance having skirted our Atlantic coasts within the period. These cyclonic systems caused, as is usual, very unsettled weather; severe gales were felt at times, rain or hail and sleet fell frequently, and the changes in temperature were sudden, fitful, and large. Sunday was cold and chiefly fine, but some local showers of sleet and hail fell. Monday was mild and changeable. At night a very deep depression approached Ireland, and at 8 a.m. of Tuesday the barometer was down to 28·63 inches at Mullaghmore, near Sligo, and to 28·79 inches even in Dublin. In the course of this day a violent S.E. gale was felt on the east coast of Scotland, while it blew hard from N.W. in Ireland, and from W. and S.W. in England. Aurora Borealis was seen on the nights of Wednesday and Thursday. On Friday afternoon a sudden rise of temperature took place. This high temperature was more than maintained on Saturday, which was spring-like in its mildness—dull, however, in England, although bright in Ireland. In Dublin the mean atmospherical pressure was only 29·534 inches, the barometer ranging from 29·848 inches at 9 p.m. of Sunday (wind, W.) to 28·790 inches at 7.30 a.m. of Tuesday (wind, W.). The mean temperature was 44·0°—highest, 56·4° on Saturday; lowest, 34·1° on Sunday. The mean dry bulb readings at 9 a.m. and 9 p.m. were 43·4°. Rain fell on five days, but only to the amount of ·257 inch, of which more than one-half (·143 inch) fell on Wednesday. The prevailing winds were W. and S.S.W.

Winter resumed its sway in the British Islands in the course of the week ended Saturday, the 25th, which began with mild, spring-like weather, and closed with frost and a snow-covered country. The most striking feature in the meteorological record for the period was the passage across the south of England in an east-north-easterly direction of a deep atmospherical depression in the interval between Monday night and Wednesday morning. In the South-east of England the barometer fell below 28·7 inches—to 28·65 inches at the mouth of the Thames—on Tuesday afternoon. The winds accompanying this system were not strong, but large quantities of rain, hail, and sleet fell in most districts. This inclement weather was all the more felt, as Sunday—while dull and rainy, though mild in Ireland—had been a spring-like day in most parts of England, except the S.W. Bright sunshine was enjoyed for many hours, and the thermometer rose to 59° and even 60° (at Loughborough) in the shade all over the central and south-eastern counties. During the following night temperature gave way quickly and never recovered itself during the remainder of the week, except in the S. of England for a few hours in front of the deep depression already referred to. In Dublin hail, or sleet and snow, fell daily on and after Monday; and on Saturday morning there was a considerable fall of unusually light and powdery crystalline snow at a temperature varying from 27° to 31°. On the night of Saturday a violent snowstorm occurred, followed by rain. The weather was extremely cloudy and dull, except on Monday, Friday, and Saturday. In Dublin the mean height of the barometer was only 29·312 inches. Atmospherical pressure ranged between 29·557 inches at 9 a.m. of Sunday (wind S.), and 28·916 inches at 7.30 a.m. of Tuesday (wind, N.N.E.). The mean temperature was 39·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 38·1°. On Sunday the thermometers in the screen rose to 52·6°. On Saturday they fell to 26·0°. The rainfall (which largely consisted of hail, snow, and sleet) measured ·993 inch, ·390 inch being referred to Wednesday. The prevailing winds were S.S.E. and E.

The last three days of the month were cold, changeable, but for the most part dry. There were sharp night frosts, and a solar halo was seen on the afternoon of the 28th, followed by a lunar halo at 8 p.m.

In Dublin, the rainfall up to February 28, 1893, amounted to 4·908 inches on 41 days, compared with 3·817 inches on 39 days in the same period in 1892, ·714 inch on 16 days in 1891, and a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 3·890 inches of rain fell in February on 25 days; and 3·380 inches in January on 18 days. The total fall to February 28th inclusive was 7·270 inches on 43 days.

The rainfall in February at Cloneevin, Killiney, Co. Dublin, amounted to 2·60 inches on 23 days. The average rainfall for February at this station is 1·543 inches, on 11·6 days. Both rainfall and rainy days were, therefore, considerably in excess this year—in fact it was a very wet month. The greatest rainfall in 24 hours was ·48 of an inch on the 1st. Since January 1, the rainfall was 5·53 inches, on 42 days.

March.—A singularly dry, warm, sunny month—more like May than March. It broke the record as regards height of temperature, deficiency of rainfall, and clearness of the sky and bright sunshine. The arithmetical mean temperature was 5·0° above the average for the month and no less than 9·0° above that of March, 1892 (39·1°). It was even 0·8 above the mean temperature of March, 1868 (47·3°), which had proved the warmest March since these records began in 1865 up to the present year. The deficiency in the rainfall was equally striking, the only comparable year for drought in March being 1871, when, however, ·815 inch of rain fell on 12 days against ·288 inch on 8 days in 1893. Not one-half of the sky was on the average covered with clouds, and the air was often very dry; consequently, the diurnal range of temperature was large—hot sunshine by day being followed by sharp nights. This was markedly the case in central England, where on more than one occasion

during the latter half of the month the thermometer in the shade traversed more than 40° within a few hours.

In Dublin the arithmetical mean temperature (48·1°) was considerably above the average (43·1°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 46·5°. In the twenty-eight years ending with 1892, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1868 (M. T. = 47·3°). In 1876 the M. T. was 41·1°, in 1879 (the "cold year") it was 42·5°, in 1888 it was as low as 39·8°, in 1889 it was 44·0°, and in 1890 it was as high as 45·1°. In 1891, it was only 41·7°; and in 1892 it was as low as 39·1°. As a general rule, February in Dublin is only a shade colder than March. This is due to the fact that the Continental anticyclone usually embraces the British Isles and Scandinavia in March, causing easterly winds. In 1892 February was actually 2·2° warmer than March, but in the present year March was 5·4° warmer than February.

The mean height of the barometer was 30·085 inches, or 0·169 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·411 inches at 9 a.m. of the 19th, having fallen to 29·267 inches at 9 a.m. of the 1st. The observed range of atmospherical pressure was, therefore, 1·144 inches—that is, more than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 46·5°, or 4·8° above the value for February, 1893. Using the formula, *Mean Temp.=min.* + (*max.—min.* × ·485), the M.T. becomes 47·9°. The arithmetical mean of the maximal and minimal readings was 48·1°, compared with a twenty-five years' average of 43·1°. On the 29th the thermometer in the screen rose to 64·8°—wind, W.S.W.; on the 17th the temperature fell to 34·0°—wind, W.N.W. The minimum on the grass was 29·0° on the 17th, and also on the 21st.

The rainfall was only ·288 inch, distributed over 8 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, was much below the average, while the rainy days were also much below it. In 1867 the rainfall in March was very large—4·972 inches on 22 days; in 1888, 3·753 inches fell on 18 days; in 1866, also, 3·629 inches fell on 21 days. On the other hand, in 1871, only ·815 of an inch was measured on 12 days, and in 1874 only ·953 of an inch fell on 12 days. In 1887 (the "dry year"), 1·485 inches of rain fell on 15 days; in 1889, 1·076 inches fell on, however, as many as 17 days; in 1890 the fall was as much as 3·693 inches on 17 days; but in 1891 only ·936 of an inch fell on 16 days, and in 1892 only ·991 of an inch on but 9 days.

The atmosphere was thick with dry smoke fog in the city on 8 days, viz., the 2nd, 3rd, 13th, 19th, 20th, 24th, 25th, and 27th. High winds were noted on 11 days, reaching the force of a gale, however, on only one occasion, the 1st. Snow or sleet occurred on the 16th and 17th; and hail fell on the 1st and 16th. The temperature exceeded 50° in the screen on as many as 26 days, compared with only 7 days in 1892, 9 days in 1891, and 19 days in 1890; while it never fell to 32° in the screen, whereas in March, 1892, frost occurred in the shade on as many as 16 nights. The minima on the grass were 32°, or less, on 12 nights, compared with 25 nights in 1892, 20 nights in 1891, and 16 nights in 1890. On 4 days the thermometer rose above 60° in the screen, while it never failed to reach 40°. In March, 1892, the thermometer did not rise to 40° in the screen on 9 days.

The first four days of the month were warm and changeable, with frequent rain or showers and variable, chiefly westerly, winds. As compared with the closing days of February a marked increase of atmospherical pressure occurred after Wednesday, the 1st. On that day a depression passed by the North of Ireland across Scotland towards Denmark. Temperature rose fast, and a considerable rainfall was reported from most British stations. A ridge of high pressure followed this disturbance, but on Friday, the 3rd, a shallower depression in the N., with a "secondary" in the S., again threw the weather into a cloudy, showery condition. Saturday, the 4th, however, proved fine, and for the most part bright in Ireland. On the 3rd the thermometer rose to 56·7° in the screen in Dublin.

Singularly favourable and mild weather for the time of year held over the British Islands throughout the week ended Saturday the 11th. The rainfall also was but slight except at some exposed stations in the N.W. of Ireland and N. of Scotland. In Scandinavia, however, conditions were far otherwise—severe cold and excessive gales and snow-storms being experienced. This state of things was brought about by the persistence of an anticyclone, in which at one time (Friday morning) the barometer touched 30·50 inches off the S.W. and S. of Ireland; while a series of atmospherical depressions of ever increasing intensity swept eastwards across Northern Europe. Of these disturbances the most serious was observed on Friday, at 8 a.m. of which day the barometer was down to 28·72 inches at Hernösand in Sweden as compared with the reading 30·50 inches recorded at the same time at Valentia Island, in Kerry. Fresh to strong westerly to north-westerly winds prevailed generally in the United Kingdom. At first the sky was very cloudy, but towards the close of the week the clouds dispersed and the air became very dry, so that the diurnal range of temperature was large—at Cambridge, on Wednesday, the maximum was 66°, the minimum was 37°. In Dublin the mean height of the barometer was 30·287 inches, pressure ranging between 30·403 inches at 9 a.m. of Wednesday (wind W.) and 29·996 inches at 9 p.m. of Saturday (wind S.W.). The corrected mean temperature was 48·4°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 46·9°. On Sunday and again on Tuesday the thermometer rose to 55·8° in the screen; on Friday it fell to 37·0° in the screen, and 31·4° on the grass. The rainfall was ·034 inch on one day—Monday. The prevalent winds were westerly and north-westerly.

The most striking feature in the meteorology of the week ended Saturday, the 18th, was the continued depression of the barometer over the Norwegian Sea and the North of Europe generally. At first temperature was high for the time of year in all parts of the British Islands; but in England the diurnal range was extremely large—amounting to 30° or upwards between Sunday afternoon and Monday morning—at Loughborough the extreme thermometer readings at 8 a.m. of Monday were: Max. 66°, Min. 33°, range 33°. As the disturbances in the far North drew after them subsidiary depressions across the United Kingdom, temperature gave way and the weather fell into an unsettled, showery, squally condition. On both Thursday and Friday hail, sleet, and snow

occurred in many parts, and electrical phenomena were observed along a track extending from the N. of Ireland across the S. of Scotland to the mouth of the Elbe. On Tuesday night bright aurora borealis had been seen in Scotland and the S. of Ireland. At 8 a.m. of Thursday the barometer stood as low as 28·54 inches at Christiansund on the W. coast of Norway, while it read 30·06 inches at Nice. Needless to say that strong S.W. to N.W. winds and gales swept over Western Europe. In Dublin the mean height of the barometer was 29·842 inches, pressure being observed to range from 29·575 inches at 7·15 a.m. of Thursday (wind, W.N.W.) to 30·386 inches at 9 p.m. of Saturday (wind, E.S.E.). The corrected mean temperature was 44·6°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 43·5°. On Sunday the screened thermometers rose to 55·9°, on Friday they fell to 34·0°. The rainfall measured ·118 inch on four days. The heaviest rainfall in 24 hours was ·058 inch on Saturday. Snow or sleet fell on Thursday and Friday; hail on Thursday. There was a slight fog on Monday night.

Many years have passed since a spell of more beautiful weather than that enjoyed during the week ended Saturday, the 25th, has been recorded in March. After Sunday, which was a cloudy day, very little cloud appeared by day or night, and warm sunny days were followed by calm, sharp nights. Throughout the week, conditions were anticyclonic in Western Europe. The centre of highest atmospherical pressure was generally found over the south of England, France, Belgium, and Holland, and in these regions, under the combined influence of a clear sky and dry air, the diurnal range of temperature was almost phenomenal. For example, at Loughborough, in Leicestershire, on Monday night the screened thermometer sank to 23°, while it rose to 65° in the course of Tuesday—a range of 42° in a few hours. A similar excessive range was observed on Saturday at the same station. In Ireland the extremes of temperature were of the same character, though much less marked. At the very beginning of the week severe frost occurred in Great Britain, the minima in the screen on Sunday being 26° at Leith, Shields, and Dungeness; 25° at York, and in London; 24° at Nairn; 23° at Oxford, and Cambridge; and 20° at Loughborough. The morning of this day in Ireland broke dull and damp, but the weather improved as the day wore on. In Dublin light easterly sea breezes by day alternated with calms by night. The mean height of the barometer was 30·313 inches, pressure ranging from 30·411 inches at 9 a.m. of Sunday (wind, E.S.E.) to 30·193 inches at 9 a.m. of Thursday (wind, calm), and again rising to 30·409 inches at 9 a.m. of Saturday (wind, E.). The corrected mean temperature was 48·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 46·2°. On Thursday, the screened thermometers rose to 61·9°; on Tuesday, they fell to 38·3°. There was no measurable rainfall after 9 a.m. of Sunday. Bright sunshine was unusually prevalent and greatly exceeded the mean during this week. At the Ordnance Survey Office, Phœnix Park, the sun shone brightly for 64·2 hours, being 76 per cent. of the possible duration of sunshine. In Guernsey the percentage was 90, in Jersey it was 91. These values in the Channel Islands are higher than any hitherto obtained during any period since the sunshine recorders were established in 1881. In nearly all British and Irish districts the percentages of bright sunshine recorded this week are far higher than any previously observed in the month of March.

The weather was by no means so settled during the closing period (26th–31st inclusive) as it had been during the preceding week. Clouds increased at times, and both atmospherical pressure and temperature became unsteady. Rainfall, however, was again markedly deficient in all parts of the United Kingdom, although in parts of Spain, Portugal, and the extreme south of France there were some heavy downpours—for example, ·67 inch fell at Lisbon on Tuesday, the 28th, and 1·50 inches at Perpignan on Wednesday, the 29th. Until this last-named day an anticyclone stretched northwestwards across the North Sea, while pressure was low and conditions were cyclonic over the Iberian Peninsula. Light to moderate easterly winds prevailed in the British Islands. The first two days of the period were cool and at times cloudy in Dublin. Tuesday proved brilliant, and on Wednesday (with the displacement of the easterly wind by a S.W. and W. current) the thermometer rose in this city to 64·8°. Thursday was cooler. On Good Friday, the 31st, a depression came in from the Atlantic causing squally S.W. winds and a slight rainfall in the evening. The diurnal range of temperature was again excessive at some inland English Stations—thus on Tuesday, the thermometer fell from 67° to 26° at Cambridge and from 64° to 24° at Loughborough. In Dublin the barometer ranged from 30·299 inches at 9 a.m. of Sunday (wind, N.E.) to 29·624 inches at 2 p.m. of Friday (wind, S.W.). On Monday the screened thermometers fell to 37·0°, on Wednesday they rose to 64·8. Rain fell on Friday to the amount of ·022 inch only.

The rainfall in Dublin during the three months ending March 31st has amounted to 5·196 inches on 49 days, compared with 4·808 inches on 48 days in 1892, only 1·650 inches on but 32 days in 1891, 7·470 inches on 45 days in 1890, 5·738 inches on 53 days in 1889, 6·097 inches on 41 days in 1888, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, only ·205 inch of rain fell on 6 days during March; and the total rainfall since January 1, 1893, equals 7·475 inches on 49 days. The corresponding figures for 1892 are ·995 inch on 9 days, the total rainfall since January 1 being 4·205 inches on 40 days.

The rainfall in March at Cloneevin, Killiney, Co. Dublin, was ·26 inch on 9 days, as against ·98 inch on 10 days in 1892, and an eight years' average of 1·90 inches on 14·5 days. The maximum in the 8 years was 3·59 inches in 1888, the minimum was ·74 inch in 1891.

April.—April proved a fitting sequel to the record-breaking March of 1893. Like its predecessor, the month was characterised by drought, bright sunshine, and a high temperature. The mean amount of cloud was only 40 per cent., falling at 9 p.m. to 33·3 per cent. So powerful was the heating power of the sun by day that, notwithstanding free radiation by night, the thermometer did

not fall below 36·2° in the screen, and 28·9° on the grass in the city of Dublin. The drought was happily interrupted in Ireland by copious falls of rain on the 16th and 17th, and again on the 29th and 30th.

In the matter of temperature, however, April, 1893, breaks the record, the mean being 3·7° above average, and also 1·0° above the mean of the Aprils of 1865 and 1874, which had been the warmest since the present records began up to 1893. Unwonted drought held throughout the month in south-eastern England, the rainfall in London, for example, being only one-tenth of an inch on only 4 days.

In Dublin the arithmetical mean temperature (51·4°) was 3·7° above the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 50·3°. In the twenty-eight years ending with 1892, April was coldest in 1879 (the cold year), (M. T.=44·5°), and warmest in 1865 and 1874 (M. T.= 50·4°). In 1886, the M. T. was 46·3°, in 1887 it was as low as 45·1°, in 1888 it was (as also in 1891) only 45·7°, in 1889, 46·1°; in 1890, 47·3°; and in 1892, 46·2°. The month now under discussion thus proves to have been the warmest April for at least 30 years.

The mean height of the barometer was 30·171 inches, or 0·321 inch above the average value for April—namely, 29·850 inches. The mercury was as high as 30·575 inches at 9 a.m. of the 8th, and fell to 29·793 inches at 4 p.m. of the 19th. The observed range of atmospherical pressure was, therefore, 0·782 inch—that is, a little more than three-quarters of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 50·3°, or 3·8° above the value for March, 1893. Using the formula, *Mean Temp.* $=min.+(max.—min. \times \cdot 476)$, the value becomes 51·1°, or 3·7° above the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 51·4°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 22nd, the thermometer in the screen rose to 66·8°—wind, S.E.; on the 14th the temperature fell to 36·2°—wind, W.S.W. The minimum on the grass was 28·9°, also on the 14th.

The rainfall was only 1·046 inches, distributed over 7 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was considerably below the average, while the rainy days were also very deficient. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882 also 3·526 inches fell on 20 days. On the other hand, in 1873, only ·498 of an inch was measured on 8 days; and in 1870 only ·838 of an inch fell, also on 8 days. The fall in 1890 was 1·575 inches on 14 days, in 1891, 1·553 inches fell on 14 days, and in 1892, 1·114 inches on 13 days.

There was a lunar halo on the 26th. The atmosphere was more or less foggy on the 6th and 17th. High winds were noted on only 4 days, and did not reach the force of a gale on any occasion. No snow or sleet was seen, but hail fell on the 29th. The temperature exceeded 50° in the screen on every day compared with only 24 days in April, 1892, and 18 days in April, 1891. It rose above 60° on 11 days, but never fell to 32° in the screen. The minimum on the grass was 32°, or less, on 5 nights, compared with 12 nights in March, 13 in February, and 16 in January. The mean lowest temperature on the grass was 38·2°, compared with 32·4° in 1892, 34·1° in 1891 and 1890, 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887.

The first day of the month was cloudy and cool, but dry.

The drought, which set in at the beginning of March, continued through the week ended Saturday, the 8th. Temperature showed a decided tendency to fall, particularly on the eastern coasts of both Ireland and Great Britain, in which parts much sea-fog was prevalent. At the beginning of the week an anticyclone lay over Ireland and England, while an extensive and deep depression, with central barometrical readings below 28·90 inches, swept eastwards across the extreme North of Europe. Beautiful, bright weather prevailed, except in the far north, where clouds gathered and rain fell. Shallow depressions formed over the S.W. of Europe on and after Tuesday, so that a decided easterly air-current set in and fogs and low temperatures prevailed on the east coasts of the British Isles, while bright sunshine and warmth held inland. The most striking example of these conditions was presented on Thursday, when the thermometer rose to 63° at Loughborough, Oxford, and Cambridge—all inland stations, whereas the maximum was only 44° at Yarmouth and 42° at Spurn Head. On Friday the maximum was 68° in London, but only 42° at Shields and Spurn Head. After Thursday a new and much larger anticyclone formed in the N.W. and N., causing N.E. winds, clouds, and low temperatures on Friday and Saturday. In Dublin the mean pressure was 30·302 inches, the barometer falling to 30·051 inches at 6·30 p.m. of Wednesday (wind, E.), and rising to 30·575 inches, at 9 a.m. of Saturday (wind, N.E.). The corrected mean temperature was 48·5°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 48·0°. On Sunday the screened thermometers fell to 36·5°, on Wednesday they rose to 61·4°. A very slight shower fell at 5 p.m. of Thursday, but yielded no measurable rainfall. The prevailing wind was easterly.

With the exception of a general decrease of temperature, the weather of the week ended Saturday, the 15th, resembled that of its immediate predecessors, being singularly fine, dry, and quiet. Anticyclonic areas were found lying over one or another portion of the British Islands on every day of the week. At the same time shallow atmospherical depressions lay over southern Europe and the Mediterranean Basin, producing easterly winds and lower temperature in England and Ireland; while deeper cyclonic systems passed eastwards or south-eastwards across northern Europe, where frost and snow resumed their sway as the week advanced. Towards the close of the period the anticyclone began to move southwards, its centre on Thursday lying over the South of Scotland, on Friday over the midland counties of England, and on Saturday over the east of France. Sharp night frosts were felt at many stations during the week—the sharpest of all occurred on Thursday night, when the thermometer fell to 24° in the screen at Loughborough and Cambridge, and to

27° at Oxford. In Dublin, Sunday, Tuesday, and Thursday were rather cloudy and very cool. Wednesday, also, was cold, but the air was dry and bright sunshine prevailed. In this city the mean height of the barometer was 30·331 inches, pressure ranging from 30·479 inches at 9 a.m. of Wednesday (wind, E.N.E.), to 30·103 inches at 9 p.m. of Saturday (wind, W. by S.). The corrected mean temperature was 47·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 47·0°. On Friday, the screened thermometers fell to 36·2°, on Saturday they rose to 60·6°. There was no rainfall until the early morning of Sunday, the 16th, when two-thousandths of an inch (·002) fell. The prevailing winds were, at first, E.N.E., afterwards W. and W.S.W.

While the general character of the weather during the week ended Saturday, the 22nd, was favourable, conditions were less stable than of late, and at the beginning of the week a grateful and copious rainfall in Ireland and Scotland gave a marvellous impetus to vegetation. On Sunday morning a shallow depression was found off the N.W. of Ireland, and a much deeper depression—with central readings of the barometer as low as 28·75 inches at Haparanda on the Gulf of Bothnia—was travelling eastwards across Lapland. In the course of the day rain fell in abundance at most Irish and several British stations, the downpour being renewed on Monday evening. At this time a well-defined anticyclone lay over the North Sea, influencing the English stations and causing finer and cooler weather. On Thursday morning the distribution of atmospherical pressure was very irregular, and several local and shallow depressions caused thunder showers in parts of Great Britain. Temperature had previously risen to an unusual height for the time of year at inland stations—to 68° at Parsonstown, 72° at Holyhead, 75° in London and at Oxford, 76° at Loughborough, and 78° at Cambridge on Wednesday. In Dublin the maximum next day (Thursday) was 66·6°, but in London it was 82° and at Cambridge 84°. Friday was very fine, but at night thunderstorms occurred at Roche's Point and Scilly. Saturday proved very warm but changeable in Ireland. In Dublin the mean height of the barometer was 30·014 inches, pressure varying between 30·151 inches at 9 p.m. of Thursday (wind, N.) and 29·793 inches at 4 p.m. of Wednesday (wind, E.S.E.). The corrected mean temperature was 55·3°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 54·5°. On Friday the minimal temperature was 46·0°, on Saturday the maximum was 66·8°. Rain fell on five days to the total amount of ·762 inch, ·370 inch being measured on Monday. The prevalent winds were first S.W., afterwards E.S.E.

The record is once more one of most favourable weather during the week ended Saturday, the 29th. Bright, sunny, warm days were followed by quiet, clear, cool nights until Saturday, when copious showers fell at intervals, refreshing the face of nature and aiding vegetation. Areas of relatively high atmospherical pressure (anti-cyclonic systems) were found lying over the greater part of the British Islands until Saturday, when an extensive and definite depression travelled eastwards across the northern half of the United Kingdom, causing squally W. to N.W. winds and the grateful showers already mentioned. Throughout the week the barometer was comparatively low over the Iberian Peninsula, the Bay of Biscay, and France. Except at Lisbon, however, where 3·40 inches of rain fell on five days up to Friday morning, the weather was at first generally dry within the area of low pressure. On Thursday there was a downpour all over the south of France, ·83 inch being measured at Nice, ·87 inch at Biarritz, and 1·34 inches at Perpignan on Friday morning. Thunderstorms occurred at Prawle Point during the night of the 22nd-23rd, and at Holyhead on Monday night. In Dublin the mean height of the barometer was 30·067 inches, pressure varying from 30·137 inches at 9 a.m. of Monday (wind, N.) to 29·887 inches at 3 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 53·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 52·5°. On Tuesday temperature rose to 65·7° in the shade; on Saturday it fell to 43·9°. Rain and hail fell on Saturday in heavy showers to the amount of ·150 inch. The prevailing winds were N. and N.W.

Sunday, the 30th, was changeable, but favourable.

The rainfall in Dublin during the four months ending April 30th amounted to 6·242 inches on 56 days, compared with 5·922 inches on 61 days during the same period in 1892, only 3·203 inches on 46 days in 1891, 9·045 inches on 59 days in 1890, 8·345 inches on 74 days in 1889, 8·090 inches on 58 days in 1888, and a twenty-five years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall during April, 1893, amounted to only 1·055 inches, distributed over only 5 days—·720 inch falling on the 16th. The total fall since January 1st, 1893, equalled 8·530 inches on 54 days.

The rainfall in April at Cloneevin, Killiney, Co. Dublin, was 1·15 inches on 6 days, as against an eight-years' average of 1·56 inches on 13·0 days. The maximal fall in 24 hours was ·63 inch on the 16th.

MAY.—Like March and April of the present year, this month was singularly fine—warm and for the most part dry. Unlike March and April, however, the amount of cloud was considerable—62·3 per cent. compared with only 49·1 per cent. in March, and only 40·0 per cent. in April. Nor was the drought at all as severe as in the two previous months. In Dublin rain fell abundantly at the beginning and in the middle of the month, the total fall being 1·666 inches, against only ·288 inch in March and 1·046 inches in April. As regards temperature, this was a "record month," the mean being 0·9° above that for May, 1868—namely, 56·7° against 55·8°.

In Dublin the arithmetical mean temperature (56·7°) was decidedly above the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 55·3°. In the twenty-eight years ending with 1892, May was coldest in 1869 (M. T. = 48·2°), in 1885 (M. T. = 48·7°), and in 1879 (the "cold year") (M. T. = 48·8°). It was warmest in 1868 (the "warm year") (M. T. = 55·8°), and 1875 (M. T. = 54·9°). In 1886 the M. T. was 50·5°; in 1887, 51·8°; in 1888, 52·5°; in 1889, 54·6°; in 1890, 53·2°; in 1891, only 49·6°; and in 1892, 53·8°.

The mean height of the barometer was 30·038 inches, or 0·049 inch above the corrected average

value for May—namely, 29·989 inches. The mercury rose to 30·455 inches at 9 a.m. of the 10th, and fell to 29·407 inches at 4 p.m. of the 19th. The observed range of atmospherical pressure was, therefore, 1·048 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 55·3°, or 5·0° above the value for April, 1893. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the value was 56·3°, or 4·7° above the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 56·7°, compared with a twenty-five years' average of 52·0°. On the 11th the thermometer in the screen rose to 70·2°—wind, W.N.W.; on the 31st the temperature fell to 42·8°—wind, N.N.E. The minimum on the grass was 38·8°, also on the 31st.

The rainfall amounted to 1·666 inches, distributed over 10 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days, therefore, were much below the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869 also 5·414 inches fell on 19 days. On the other hand, in 1871, only ·378 of an inch was measured on 9 days; in 1876 only ·798 of an inch fell on 6 days; in 1887 only ·882 of an inch on 10 days; and in 1888 only ·978 of an inch on 11 days. In 1890, 2·438 inches fell on 17 days. In 1891 May was the first month in which the rainfall exceeded the average. It amounted to 2·792 inches on 17 days. In 1892 the large amount of 4·177 inches fell on 19 days.

Solar halos were seen on the 6th and 10th. High winds were noted on only 4 days, never attaining the force of a gale. Thunder was heard on the 15th, 20th, and 29th. No hail, sleet, or snow fell.

During the month the thermometer did not fall below 32°, either in the screen or on the grass. The mean minimal temperature on the grass was 45·6°, compared with 41·3° in May, 1892, 37·7° in 1891, 42·2° in 1890, 42·4° in 1889, 37·5° in 1888, and 37·9° in 1887.

During the period ended Saturday, the 6th, the weather was most favourable. Rain fell in copious showers on Monday and Tuesday, the 1st and 2nd, after which came a succession of fine, dry days, with intervals of hot sunshine. On Sunday, April 30th, a "hollow" of low atmospherical pressure stretched south-eastwards from Iceland to Denmark, so that N.W. winds, low temperatures, and changeable showery weather were experienced in the British Islands. During the next two days the barometer was unsteady, especially over Ireland and Scotland, in which countries rain fell pretty freely. In the South of England and the neighbourhood of London, however, the drought continued almost uninterruptedly. On Thursday a large anticyclone began to form over Norway, the North Sea, and Great Britain, and the weather became once more finer, brighter, and warmer. Over Ireland much cirriform cloud was at this time daily observed travelling in an upper air-current from S.W., while the surface wind was S.E. or E. In Dublin the air-pressure ranged from 29·778 inches, at 4 p.m. of Tuesday (wind, S.W.) to 30·284 inches at 9 a.m. of Saturday (wind, E.S.E.). On Monday the shade minimum was 46·1°, on Friday the shade maximum was 68·7°. Rain fell on the first two days to the amount of ·402 inch, ·323 inch being measured on Monday, the 1st. The prevalent winds were first westerly, then east-south-easterly. A solar halo was seen on Saturday forenoon.

The weather was exceedingly fine and dry throughout the week ended Saturday, the 13th—at least in England and Ireland—in Scotland refreshing rains fell on Wednesday and the two following days. At the beginning of the period a vast anticyclone stretched south-westwards from Sweden, where the barometer stood above 30·9 inches (30·95 inches at Hernösand at 8 a.m. of Sunday), across the North Sea to the British Isles. The wind was rather squally from E. and S.E. and temperature was low—night frosts occurring in parts of England as well as on the Continent. By Wednesday a great change was in progress—the barometer was falling in the N. and rising in the S., while a tongue of high pressure still stretched across England and Ireland. The change was attended by a copious rainfall in many parts of France on Tuesday; and was followed by the setting in of westerly winds over the northern half of the British Isles, where also clouds increased and rain fell as above mentioned. After a sharp night on Wednesday, temperature rose considerably in England on Thursday, when also the thermometer exceeded 70° in the shade in Dublin for the first time this season. Friday was at first cloudy, but afterwards fair; and Saturday proved a brilliant summerlike day. In Dublin the mean height of the barometer was 30·317 inches, pressure ranging from 30·455 inches at 9 a.m. of Wednesday (wind, E.N.E.) to 30·070 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 55·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 55·5°. On Thursday the thermometer rose to 70·2° in the shade, having fallen to 47·1° on Wednesday. There was no rainfall. The prevailing winds were E. and W.N.W.

The week ended Saturday, the 20th, may be said to have witnessed the break-up of the drought, which—with slight and transitory interruptions—had held in Western Europe since the end of February. At the beginning the barometer was falling over England, Ireland, and the West of France, as a large, but not deep, depression formed over the Bay of Biscay and the Atlantic off our S.W. coasts. On Sunday the weather remained dry in most places, but much lofty cirriform stratus cloud came up from the southward, causing the sky to assume an unsettled, thundery appearance. On Monday thunder storms occurred in the West of England and in Wales, and from that time onwards to the close of the week thunder and lightning were daily reported from one part or another of the British Islands. Some very heavy rainfalls occurred—for example, 1·05 inches at Roche's Point on Tuesday, 1·60 inches at Loughborough on Wednesday, ·71 inch at Parsonstown on Friday, and ·72 inch in the City of Dublin on Saturday. On this day 1·030 inches of rain fell at the Ordnance Survey Office, Phœnix Park, and 1·020 inches at the Botanic Gardens, Glasnevin. As temperature remained fairly high throughout, the beneficial effects of the rainfall on vegetation became instantly apparent. In Dublin the mean height of the barometer was 29·634 inches, or as much as ·683 inch

below the mean for the preceding week. The barometer read 30·010 inches at 9 a.m. of Sunday (wind, E.S.E.), and fell to 29·407 inches at 4 p.m. of Friday (wind, E.S.E.). The corrected mean temperature was 57·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·4°. On Sunday the screened thermometers rose to 65·7°, on Saturday they fell to 48·2°. Distant thunder was heard on Monday and Saturday. Rain fell on three days to the amount of ·947 inch, ·720 inch being measured on Saturday. The prevailing winds were E. and S.E.

Changeable, but favourable weather prevailed during the week ended Saturday, the 27th. At first showery, it afterwards became dry and fine, although the amount of cloud remained considerable to the end. The period began with a high pressure system lying over the Baltic and Scandinavia, and depressions to the westward and northwestward of the British Islands. As the week advanced these conditions became reversed—the depressions travelled northeastward, and a new area of high pressure (anticyclone) came in over Ireland from the Atlantic. At the close of the period a low pressure system was found over the Baltic and Sweden, while the anticyclone remained almost stationary over, and off the west coast of Ireland. In Dublin Sunday forenoon was rainy; light showers fell in the afternoon, but the evening proved fair. Monday was cloudy but fine. Tuesday was cloudy, showery, and squally. Some rain fell on Wednesday morning, after which the weather remained chiefly dry, but very cloudy to the close of the week. The mean height of the barometer in Dublin was 30·014 inches, pressure ranging from 29·543 inches at 9 a.m. of Sunday (wind, W.) to 30·337 inches at 9 p.m. of Friday (wind, N.N.W.). The corrected mean temperature was 56·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 55·7°. On Sunday the screened thermometers fell to 46·9°; on Saturday they rose to 64·8°. Rain was measured on four days, the total amount being ·137 inch, of which ·059 inch fell on Sunday. The prevalent wind was first westerly, then northerly.

During the last four days the weather, which was chiefly fine but changeable, was governed by a depression over the south of Sweden and an anticyclone to the westward of Scotland. North-easterly winds prevailed, and a tendency to electrical disturbances existed on Sunday and Monday, the 28th and 29th. On the afternoon of the latter day thunder and heavy rain occurred in both London and Dublin. The weather on the 30th and 31st was bright and bracing—hot sunshine and a cold N.E. wind asserting themselves with alternate power.

The rainfall in Dublin during the five months ending May 31st amounted to 7·908 inches on 66 days, compared with 19·099 inches on 80 days in 1892, only 5·995 inches on 63 days in 1891, 11·483 inches on 76 days in 1890, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a 25 years' average of 10·496 inches on 81·6 days.

It may be remembered that on Saturday, May 28th, 1892, 2·056 inches of rain were measured at this station, 1·900 inches having fallen within 6 hours, or at the rate of 7·6 inches in 24 hours. No such measurement had been recorded in Dublin since October 27, 1880, when 2·736 inches of rain fell. May 28, 1892, was only the third occasion within the past twenty-eight years on which the rainfall exceeded 2 inches within 24 hours in Dublin.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in May, 1893, was 1·035 inches, distributed over 11 days. Of this quantity ·310 inch fell on the 16th, and ·200 inch on the 29th. The total fall since January 1st, 1893, equals 19·565 inches on 65 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in May was 1·12 inches on 10 days, compared with an eight years' average of 2·49 inches on 15·5 days. The total fall since January 1 at this station has been 8·06 inches on 67 days. The maximal fall on any one day in May was ·40 inch on the 20th.

JUNE.—June, 1893, was the fourth month in succession with a mean temperature above average and a rainfall below average. The month under review did not—it is true—"break the record" as regards either high temperature or scanty rainfall; but it was in all respects most favourable. In Dublin rain fell freely from the 3rd to the 6th inclusive (·521 inch) and again from the 22nd to the 28th inclusive (1·144 inches), but the weather was otherwise dry, except for local thunder-showers on the 15th.

In Dublin the arithmetical mean temperature (59·9°) was above the average (57·8°) by 2·1°; the mean dry bulb readings at 9 a.m. and 9 p.m. were also 59·9°. In the twenty-eight years ending with 1892, June was coldest in 1882 (M. T.=55·8°), and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°), in 1865 (M. T.=61·0°), and in 1868 (the "warm year") (M. T.=60·5°). In 1886 the M. T. was 57·5°; in 1888, 56·2°; in 1889, 59·5°; in 1890, 58·1°; in 1891, 59·0°; and in 1892, 56·7°.

The mean height of the barometer was 30·002 inches, or 0·085 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·398 inches at 9 a.m. of the 7th, and fell to 29·320 inches at 11 p.m. of the 27th. The observed range of atmospherical pressure was, therefore, 1·078 inches—that is, less than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 59·9°, or 4·6° above the value for May, 1893. Using the formula, *Mean Temp.*=*Min.*+(*max.*−*Min.* × ·465), the value was 59·4°, or 2·2° above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 59·9°, compared with a twenty-five years' average of 57·8°. On the 19th the thermometer in the screen rose to 74·7°—wind, N.N.E.; on the 23rd the temperature fell to 46·9°—wind, N.N.W. The minimum on the grass was 42·8° also on the 23rd.

The rainfall amounted to 1·716 inches, distributed over 12 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall was, therefore, slightly below, while the rainy days were also below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also

4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 of an inch was measured on 6 days; in 1887, the rainfall was only ·252 of an inch, distributed over only 5 days; in 1874 only ·405 of an inch was measured on 9 days; and in 1868 only ·677 of an inch fell on but 6 days. In 1888 the rainfall was as much as 3·045 inches, distributed over as many as 18 days. In 1890 it was 1·930 inches on 18 days, in 1891 2·753 inches on 14 days, and in 1892 1·671 inches on 17 days.

High winds were noted on 7 days, but the force of a gale was attained on only one occasion—the 28th. Temperature reached or exceeded 70° in the screen on 5 days, compared with 17 days in 1887, only 1 day in 1888, 10 days in 1889, only 2 days in 1890, 6 days in 1891, and 4 days in 1892. Thunder was heard on the 15th. A solar halo was seen on the 11th.

On Thursday, the 1st, a depression which had for several days lain almost motionless over the south of Sweden dispersed, and an irregular area of low pressure began to form over Ireland. The weather, however, remained dry until Saturday, the 3rd, when electrical showers fell heavily in places, particularly at Blackrock, Co. Dublin. Thunder was heard on this day at Glasnevin Botanic Gardens.

At the beginning of the week ended Saturday, the 10th, the weather was unsettled and showery, owing to the presence of shallow irregular depressions to the northward, while an anticyclone lay over the Bay of Biscay. In Dublin rain fell very freely on Monday and in smaller quantity on Tuesday. On Sunday thunderstorms occurred all along the east coast of Great Britain. During most of this changeable time the barometer rose steadily, so that by 8 a.m. of Wednesday readings were everywhere high and remarkably uniform. In fact, at the hour named, the extreme difference in atmospherical pressure all over the United Kingdom was only ·08 inch—the highest reading being 30·42 inches at Yarmouth, and the lowest 30·34 inches in the Scilly Islands. After Wednesday the anticyclone held to the close of the week, the area of highest pressure being found off the east coast of Scotland, where dense fogs and low temperature prevailed. In most other parts of the Kingdom summer warmth daily increased until Saturday—the thermometer rising to 79° at Loughborough on Wednesday, 76° at Liverpool on Thursday, and 74° at Parsonstown and in London on Friday. On the evening of this day a thunderstorm with heavy rain (1·19 inches) occurred at Parsonstown. In Dublin the mean height of the barometer was 30·313 inches, pressure ranging from 30·105 inches at 9 a.m. of Sunday (wind, W. by S.) and 30·398 inches at 9 a.m. of Wednesday (wind, N.E.). The corrected mean temperature was 58·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 59·2°. On Thursday both maximal and minimal temperatures for the week were recorded—viz., 69·6° and 49·5°—range, 20·1°. Rain fell on the first three days to the amount of ·512 inch, ·259 inch being registered on Sunday and ·201 inch on Monday. The prevailing winds were at first W.S.W., afterwards E. Much fog and haze prevailed in the Irish Sea after Wednesday, so that the fog-gun at the Kish-bank lightship was frequently fired both by day and by night.

Splendid weather characterised the week ended Saturday, the 17th. Until Wednesday it was cool as well as fair, but on and after that day temperature was high and summerlike by night as well as by day. On Sunday local thunderstorms occurred in the N. and N.W. of Ireland, notwithstanding an anticyclonic distribution of atmospheric pressure. After Sunday a shallow depression advanced northwards across France. It caused thunderstorms and heavy rains over the greater part of that country, but in the British Isles only local thundershowers occurred, although thunder and lightning were very prevalent on Wednesday and Thursday. On the afternoon of the latter day thundershowers fell in Dublin, yielding ·051 inch of rain, the only rainfall of the week. In this city the influence of easterly seabreezes in lowering day-temperature was well seen, particularly in the earlier part of the period—thus, the maxima of the first four days were 66°, 65°, 65°, and 67° in Dublin, compared with 75°, 70°, 71°, and 75° at Parsonstown. On the east coast of Great Britain, similarly, the thermometer failed to reach 60° at most stations on Sunday and Monday, In Dublin the mean height of the barometer was 30·104 inches, pressure decreasing from 30·229 inches at 9 a.m. of Sunday (wind, E.N.E.) to 29·883 inches at 9 a.m. of Wednesday (wind, E.), and then increasing to a maximum of 30·373 inches at 9 p.m. of Saturday (wind, E.). The corrected mean temperature was 61·8°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 62·9°. On Tuesday the screened thermometers fell to 50·1°, on Saturday they rose to 72·9°. The mean direction of the wind was easterly.

As to the week ended Saturday, the 24th—at first summerlike in the extreme—very warm, calm and bright—the weather afterwards fell into a very unsettled state, becoming cold, squally, and showery after Wednesday, the 21st—the longest day. On Sunday, the anticyclonic isobar of 30·3 inches embraced nearly the whole of the British Islands—at 8 a.m. the extreme pressures at mainland stations differed by only *one-tenth* of an inch, the highest readings being 30·38 inches at Loughborough, Cambridge, Malin Head, and Belmullet; the lowest being 30·28 inches at Prawle Point in Devon. The weather was bright, calm, and hot—the thermometer rising to 86° in the shade at Cambridge and Loughborough, and to 80° even at Parsonstown and Valentia Island. In the evening a thunderstorm occurred at the last-named station. On Monday the heat was still more intense—88° in the shade being recorded in London and at Cambridge. Thunderstorms occurred towards evening in the South of Ireland, South Wales, and the eastern and south-eastern parts of England. After this a cold northerly current passed rapidly southwards, bringing heavy showers which became general during the last three days. On Thursday a depression formed over Scotland and moved slowly south-eastwards and finally eastwards, becoming deeper and larger as it travelled. At 8 a.m. of Friday the barometer was down to 29·24 inches at Shields, and below 29·30 inches all over the north of England and south of Scotland. In Dublin the mean pressure was 29·846 inches, the barometer falling from 30·360 inches at 9 a.m. of Sunday (wind, E.), to 29·467 inches at 9 a.m. of Friday (wind, N. by W.). The corrected mean temperature was 59·0°—that for Sunday and Monday having been 65·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 58·7°. On

Monday the thermometers in the screen rose to 74·7°; on Friday they fell to 46·9°. Rain fell on the last three days to the amount of ·310 inch, ·130 inch being measured on Thursday and ·100 inch on Saturday. The prevalent wind was northerly—N.N.E. to N.W.

During the closing period of the month—from the 25th to the 30th inclusive—the weather presented two distinct types. Unsettled, squally, and showery as well as cool at first, it improved after Wednesday, the 28th, and the month closed with fine, warm, and in all respects summerlike conditions. On Sunday, the 25th, the well-defined depression, which had travelled from Scotland in a south-easterly direction on the previous Friday (see above), lay with its centre over the south of Norway. N.W. winds and cool, showery weather prevailed in the British Islands. In Dublin heavy showers fell locally at 3.30 and 11 p.m. Next day (Monday) an irregularly-shaped depression passed northwards across Ireland, causing a heavy rainfall in the south of this country (1·10 inches at Roche's Point, Cork), and in Wales and parts of England. During Tuesday and Wednesday a well-marked cyclonic system travelled north-eastwards from the N. of Ireland and across Scotland to the Norwegian Sea, where it dispersed. This disturbance produced moderate to fresh S.W. and W. gales at some Irish stations, as well as in the English Channel and off the mouth of the Thames. The barometer now rose quickly, and at 8 a.m. of Friday, the 30th, atmospherical pressure was uniformly high all over the kingdom—pressure ranging only from 30·20 inches over Central England to 30·05 inches at Belmullet. Quiet, bright, summerlike weather was the consequence, and so the month closed. In Dublin, during this period, the barometer ranged from 29·320 inches at 11 p.m. of Tuesday (wind, S.S.W.) to 30·142 inches at 9 a.m. of Friday (wind, S.E.). As regards temperature, on Monday and Friday the minimum in the thermometer screen was 50·0°; on Tuesday the maximum was 69·4°. Rain fell on the first four days of the period to the amount of ·834 inch, ·492 inch being registered on Monday. This was the maximal fall in 24 hours recorded during the month. The prevailing winds were S.E. and S.W.

The rainfall in Dublin during the six months ending June 30th amounted to 9·624 inches on 78 days, compared with 11·770 inches on 97 days in 1892, 8·748 inches on 77 days in 1891, 13·413 inches on 94 days in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a twenty-five years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in June, 1893, was 2·211 inches, distributed over 10 days. Of this quantity ·750 inch fell on the 26th, and ·410 inch on the 5th. The total fall since January 1 has been 11·776 inches, on 75 days.

The rainfall at Cloneevin, Killiney, Co. Dublin, amounted to 1·63 inches on 10 days. The greatest fall in 24 hours was ·61 inch on the 26th. The average rainfall for June in eight years was 1·42 inches on 11·5 days. There was absolute drought from the 7th to the 21st, both days inclusive. Since January 1, 1893, 9·69 inches of rain have fallen on 77 days, the average rainfall for the six months ending June 30 having been in eight years 10·66 inches on 82 days.

JULY.—A changeable, rather showery, but warm month, of high mean temperature and almost average rainfall, with a decided prevalence of north-easterly and north-westerly winds.

In Dublin the arithmetical mean temperature (61·6°) was decidedly above the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 60·5°. In the twenty-eight years ending with 1892, July was coldest in 1879 (the "cold year") (M. T. = 57·2°). It was warmest in 1887 (M. T. = 63·7°), and in 1868 (the "warm year") (M. T.=63·5°). In 1886 the M. T. was 61·0°; in 1888 it was as low as 57·3°; in 1889 it was 58·7°; in 1890, 58·1°; in 1891, 59·0°; and in 1892, 57·8°. From this, July, 1887, proves to have been the warmest since the present records commenced, whilst July, 1879, was the coldest. In only 2 years since 1864 was July colder than in the year 1892.

The mean height of the barometer was 29·896 inches, or ·019 inch below the corrected average value for July—namely, 29·915 inches. The mercury marked 30·234 inches at 9 p.m. of the 27th, and fell to 29·429 inches at 7 15 p.m. of the 19th. The observed range of atmospherical pressure was, therefore, 0·805 inch—that is, a little more than eight-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 60·5°, or 0·6° above the value for June, 1893. Using the formula, *Mean Temp.* = *min.* + (*max.—min.* × ·465), the value was 61·1°, or 0·9° above the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 61·6°, compared with a twenty-five years' average of 60·6°. On the 23rd, the thermometer in the screen rose to 74·5°—wind, S.W.; on the 22nd the temperature fell to 50·0°—wind, W.N.W. The minimum on the grass was 44·8° on the 21st and again on the 22nd.

The rainfall was 2·042 inches, distributed over 14 days. The average rainfall for July in the twenty-five years, 1865–89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was considerably below the average, while the rainy days were also below it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1871 also 4·391 inches fell on 28 days. On the other hand, in 1870, only ·539 of an inch was measured on 8 days; in 1869, the fall was only ·739 of an inch on 9 days, and in 1868, only ·741 of an inch fell on but 5 days. In 1892, 1·952 inches fell on 12 days.

High winds were noted on 9 days, but did not attain the force of a gale on any occasion. Temperature reached or exceeded 70° in the screen on 8 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In July, 1888, the maximum was only 68·7°. In July, 1891, maxima of 70° were reached on only 3 days, and in July, 1892, on only 2 days. Severe thunderstorms occurred on the 12th, and distant thunder was heard on the 13th.

Saturday, the 1st, was very fine and warm, with beautiful cirro-cumuli travelling from S.

Warm and generally favourable weather held during the week ended Saturday, the 8th. In parts of England severe thunderstorms and heavy rains were felt in the beginning—on Sunday and Monday in the N. and N.E. as well as in the North Midland Counties; on Tuesday, in the S.W. and S. of that country and in the English Channel. On Saturday electrical disturbances were again

prevalent. On Monday the rainfall was 1·38 inches at York and 1·8 inches at Stoke-on-Trent; on Tuesday 2·05 inches of rain fell at Prawle Point in Devonshire, 1·15 inches at Jersey, ·91 inch at Hurst Castle, in Hants, and ·57 inch at Dungeness in Kent. The distribution of atmospherical pressure was irregular and shifting until Thursday, when the barometer began to give way steadily in the west, and freshening S.E. and S. winds sprang up on the Irish coasts, with heavy rain at Valentia Island (·68 inch at 8 a.m. of Friday). The heat in England was very great on Sunday, when the thermometer rose to 83° at Oxford, 84° in London and at Loughborough, and 85° at Cambridge; and also on Thursday, when the maxima were 81° at Loughborough, 83° at Oxford, 84° in London, and 86° at Cambridge. On Friday the thermometer rose to 90° at Cambridge, 88° at Loughborough, and 87° in London. At 8 a.m. of Saturday, temperature was 80° in London and 79° at Cambridge, and the thermometer subsequently rose to 87° in London, 92° at Cambridge, and 96° locally at Elsing in Norfolk. In Ireland the highest readings were about 12° to 15° lower—75° being touched at Belmullet, Co. Mayo, on Wednesday. In Dublin the maximum exceeded 70° on five days, the highest reading of all being 71·8° on Monday and Saturday. The minimum in the screen was 54·2° on Thursday. The mean height of the barometer was 29·960 inches, pressure falling from 30·201 inches at 9 a.m. of Monday (wind, N.E.) to 29·591 inches at 9 p.m. of Saturday (wind, S.E.). The corrected mean temperature was 63·2°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 62·8°. The rainfall ·187 inch on one day—·184 inch of the amount fell on the morning of Sunday, July 9. The prevailing winds were first N.E., afterwards S.E.

Very unsettled, rainy, thundery weather held during the greater part of the week ended Saturday, the 15th, and temperature showed a decided falling off compared with the previous sennight. At 8 a.m. of Sunday a depression lay over the British Islands, its centre stretching from Ulster to the Lowlands of Scotland. It caused heavy rains in many places—2·81 inches being measured at Malin Head on Monday morning. In Dublin rain fell in torrents from 11 to 11.30 a.m. of Sunday, and on this day as well as on Monday thunderstorms occurred over the greater part of England. On Tuesday a new depression appeared off the S.E. of Ireland, whence it travelled slowly eastwards and north-eastwards to the Kattegat, which it reached on Friday morning. This system was accompanied by severe thunderstorms in many places. On Wednesday two distinct storms passed over Dublin—the second causing torrents of rain (·550 inch) in an hour (3 15 to 4 15 p.m.). At the Ordnance Survey Office, Phœnix Park, the rainfall on this day was 1·120 inches. Next day also there were heavy thundershowers near this city. Friday proved cloudy and cool, but rainless. On Saturday, however, showers again set in, as a new and large but shallow depression advanced over our northern coasts. In Dublin the mean height of the barometer was 29·768 inches, pressure ranging from 29·532 inches at 9 a.m. of Sunday (wind, W.) to 30·019 inches at 9 p.m. of Friday (wind, N.). The corrected mean temperature was 58·0°, the mean dry bulb readings at 9 a.m. and 9 p.m. being 58·6°. On Wednesday temperature rose to 67·9° in the screen, on Friday it fell to 51·8°. The rainfall measured 1·389 inches, on five days, ·871 inch being registered on Wednesday and ·349 inch on Sunday. The wind was variable—S., N.E., N., and W. being the predominant directions.

Changeable, showery, but withal favourable weather held throughout the week ending Saturday, the 22nd. The general distribution of atmospherical pressure was cyclonic in and near the British Isles—primary systems of some depth passing eastwards across the North of Scotland, while numerous secondary systems brought rain and squalls to the southern half of the United Kingdom also. Owing to the amount of cloud and to the freshness of the S.W. to N.W. winds which prevailed, temperature never became very high and seldom exceeded 70° even in the S.E. and centre of England, On the Continent, when the barometer was higher and conditions were at times anticyclonic, much warmer weather was experienced—at least towards the close of the week. Thus on Thursday the thermometer rose in the shade to 82° in Paris and 88° in Berlin, while the maximum on this day in London was only 68°. At 8 a.m. of Friday temperature was as high as 72° at Stockholm. In Dublin the extremes of temperature for the week occurred on Saturday—the minimum being 50·0° and the maximum 68·9°. The mean height of the barometer in this city was 29·788 inches, pressure ranging from 30·031 inches at 9 p.m. of Monday (wind, N.N.W.) to 29·429 inches at 7.15 p.m. of Wednesday (wind, W.), from which low value it again increased to 30·037 inches at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 59·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 59·1°. The rainfall amounted to ·350 inch on five days—·161 inch being registered on Tuesday. The prevailing winds were westerly (S.W. and N.W.).

While changeable and far from settled, the weather was chiefly fine and dry in the period ended Saturday, the 29th. The general distribution of pressure was cyclonic in the North, anticyclonic in France and Germany, as well as in the British Islands on Thursday, the 27th, when an area of high pressure passed eastwards across Ireland to England. The fine, quiet weather accompanying this system was of short duration, and on Friday a fresh depression appeared off the N.W. of Scotland, causing clouds to increase and a shift of wind to S.W., from which point it freshened at some stations. Before the anticyclonic period, thunderstorms occurred very generally over the midland, eastern and south-eastern parts of England on Wednesday, but the attendant rainfall was not large. In Manchester, however, ·810 inch fell. Showers fell in many places on the day named, and with the advent of northerly winds and a clearing sky, temperature fell fast in the succeeding night. In Dublin the mean height of the barometer was 30·005 inches—pressure ranging between 29·747 inches at 9 p.m. of Monday (wind, W.) and 30·234 inches at 9 p.m. of Thursday (wind, N.). The corrected mean temperature was 61·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 61·3°. On Sunday the thermometer rose to 74·5° in the screen; on Thursday it fell to 50·2°. The rainfall amounted to ·063 inch, of which ·058 inch was measured on Saturday. The prevalent winds were between W. and N.

Sunday, the 30th, was bright and fair in Dublin, but heavy showers fell in Edinburgh and thunderstorms occurred along the east coast of England. Monday, the 31st, was changeable and showery in many places.

The rainfall in Dublin during the seven months ending July 31st amounted to 11·666 inches.

on 92 days compared with 13·722 inches on 109 days during the corresponding period in 1892, 10·935 inches on 92 days in 1891, 15·587 inches on 118 days in 1890, 13·146 inches on 112 days in 1889, 15·994 inches on 109 days in 1888, 7·935 inches on 80 days in 1887, and a 25 years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·290 inches on 15 days, compared with 2·925 inches on only 10 days in 1892, 1·325 inches on 18 days in 1891, and 1·489 inches, distributed over 18 days in 1890. Of the total rainfall ·360 inch fell on the 9th, and ·330 inch on the 13th. The total fall since January 1 has been 13·066 inches on 90 days, compared with 16·708 inches on 90 days in 1892.

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was 1·36 inches on 17 days, compared with an eight years average of 1·864 inches on 15 days. On the 13th the rainfall was ·26 inch. Since January 1, 1893, 11·05 inches of rain have fallen at this station (Cloneevin).

August.—Although changeable, as in 1892, and forming no exception to the rule that August is characterised by heavy rains, this was a record month as regards high temperature. On no fewer than 14 days did the thermometer exceed 70° in the shade, and the mean temperature was one degree above that of August, 1871, when it reached 62°. The present month also is remarkable for the magnificent display of lightning which occurred on the evening and during the night of the 9th. The cyclonic depressions, which are periodic in the last week of August, arrived about a week earlier than usual, the barometer falling to 28·80 inches off the west coast of Scotland on the 21st.

In Dublin the arithmetical mean temperature (63·0°) was much above the average (59·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 61·3°. In the twenty-eight years ending with 1892, August was coldest in 1881 (M. T.=57·0°), and warmest in 1871 (M. T.=62·0°). In 1885, the M. T. was only 57·1°; in 1879 (the "cold year"), it was 57·7°; in 1887, 60·3°; in 1888, 58·2°; in 1889, 58·6°; in 1890, only 57·2°; in 1891, 58·1°; and in 1892, 60·0°.

The mean height of the barometer was 29·965 inches, or 0·068 inch above the corrected average value for August—namely, 29·897 inches. The mercury marked 30·396 inches at 9 a.m. of the 29th, and fell to 29·290 inches at 9 a.m. of the 21st. The observed range of atmospherical pressure was, therefore, 1·106 inches—that is, a little more than an inch and one-tenth.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 61·3°, or 3·7° above the value in August, 1888 and 1889, 5·0° above that in 1890, 4·1° above it in 1891, and 2·3° above it in 1892. It was also 0·8° above the value for July, 1893. Using the formula, *Mean Temp.* = *min.* + (*max.*—*min.* × ·47), the mean temperature was 62·6°, or 3·3° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 63·0°, compared with a twenty-five years' average of 59·7°. On the 15th the thermometer in the screen rose to 79·8°—wind, light and variable; on the 26th the temperature fell to 47·9°—wind, N.W. The minimum on the grass was 41·6° on the 28th.

The rainfall was 2·713 inches, distributed over 16 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, was slightly below average, while the rainy days were slightly in excess of the average. In 1874, the rainfall in August was very large—4·946 inches on 18 days; and in 1868 also 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1887, 1·520 inches of rain fell on 16 days; in 1888, 1·270 inches on 12 days; in 1890, 2·799 inches on 19 days; in 1891, 4·953 inches on 25 days, and in 1892, 3·557 inches on 22 days.

High winds were noted on as many as 10 days, and attained the force of a gale on three occasions—namely, the 4th, 20th and 21st. A thunderstorm of great severity occurred on the 9th. Thunder was also heard on the 18th. Lightning was also seen on the 13nd and 18th. Temperature reached 70° in the screen on as many as 14 days. Hail fell on the 18th. It was foggy on the 12th, 13th, and 14th.

The weather remained changeable and showery, with fresh westerly (S.W. to N.W.) winds, throughout the period ended Saturday, the 5th. A new disturbance reach our northwest coasts on Tuesday, the 1st, leading to rain without much wind. On Wednesday afternoon, however, the barometer fell briskly and the wind backed to S.W. and freshened with a threatening appearance as a much more decided depression approached the N.W. of Ireland from the Atlantic. This system was quickly followed by another on Thursday night, so that by Friday the weather was thoroughly broken, squally and showery, in all parts of the United Kingdom. On the afternoon of this day thunderstorms and heavy rains occurred in London and many other places. A brisk recovery of pressure now took place and the wind drew towards N. and moderated, with fine dry weather on Saturday. In Dublin the mean height of the barometer for the week ended Saturday, the 5th was 29·861 inches, pressure ranging between 29·534 inches at 9 a.m. of Friday (wind, W. by S.) and 30·068 inches at 9 p.m. of Saturday (wind, N.). The corrected mean temperature was 60·4° The mean dry bulb readings at 9 a.m. and 9 p.m. were 58·8°. The screened thermometers rose to 71·3° on Friday and fell to 52·4° on Tuesday. The rainfall was ·813 inch on five days, ·270 inch being measured on Wednesday. The prevailing wind was N.W. Changeable, but very warm and generally summerlike weather characterised the week ended Saturday, the 12th. On Wednesday and Thursday thunderstorms of quite exceptional intensity raged over many parts of England and Ireland, extending subsequently to parts of Scotland also. In Ireland, the distribution of atmospherical pressure was cyclonic, except on Tuesday and Saturday, when a Continental anticyclone spread westwards as far this country. As the general direction of the wind in the British Islands was southerly, temperature ranged very high—the thermometer rising to 85° or 86° at the inland English stations on Tuesday and Wednesday—even at Holyhead a maximum of 83° was reached on Wednesday. The highest in Paris on the same day was 91°. This tropical heat was the more re-

markable, as the week commenced with very low temperatures, indeed, the minima recorded on Sunday morning were 46° in London and at Oxford, 44° at Leith, 43° at York, Loughborough, and Ardrossan; 42° at Sumburgh Head, 41° at Wick and Aberdeen, 40° at Stornoway, and 38° at Nairn! But the most striking phenomenon of the week was the violent thunderstorm of Wednesday night. In Dublin the lightning, which was almost incessant from dusk until after midnight, was extraordinarily vivid. The storm passed from S.S.E. to N.N.W. directly over the city between 10 and 11 p.m., in which time a quarter of an inch of rain fell. The mean height of the barometer was 29·951 inches, pressure ranging between 29·806 inches at 4 p.m. of Thursday (wind, S.E.) and 30·136 inches at 9 p.m. of Saturday (wind, S.). The corrected mean temperature was 65·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 63·8°. On Friday the screened thermometers rose to 77·7°, having fallen to 53·0° on Sunday. The rainfall was ·460 inch on four days, ·250 inch being recorded on Wednesday. The prevalent winds were S.W. and S.E.

Many years have passed since such really tropical heat has been experienced in Spain, France, and the British Isles, as that which has made the week ended Saturday, the 19th, memorable in meteorological annals. At Rochefort, on the west coast of France, the daily maxima were 102°, 106°, 91°, 93°, 100°, 90°, and 81°. In London the corresponding values were 81°, 85°, 87°, 90°, 92°, 93°, and 78°. On Thursday night the thermometer did not sink below 72° in London, and by 8 a.m. of Friday it had already risen to 84°. Even in Dublin a maximum of 79·8° was recorded on Tuesday, the 15th—this being the highest shade temperature registered in the Irish capital since July 16, 1876, when the phenomenal reading 87·2 was attained. On Tuesday the maximum at the Ordnance Survey Office, Phœnix Park, was 82·0°; at Glasnevin Botanic Gardens it was 80·6°. Only on the nights of Tuesday and Friday did the minimum fall below 60°. On every day the maximum exceeded 70°. There was an anticyclonic distribution of atmospherical pressure over western Germany, France, England, and Ireland until Thursday, when isobars became cyclonic and decided gradients for southerly winds formed over all parts of the United Kingdom. Thunderstorms of some severity occurred in the North of Ireland and the northern half of Great Britain on Tuesday night, while drenching showers of rain and hail fell in and about Dublin on Friday, accompanied by thunder. It is noteworthy that the weather was quite cool in Scandinavia throughout the week. In Dublin the mean height of the barometer was 29·965 inches, pressure ranging from 30·170 inches at 9 a.m. of Monday (wind, S.S.E.), to a minimum of 29·627 inches at 9 p.m. of Saturday (wind, S.). The corrected mean temperature was 67·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 66·6°. On Tuesday, the shade thermometers rose to 79·8°; on Saturday they fell to 58·1°. The rainfall was ·696 inch on two days, ·516 inch falling in heavy showers on Friday, when some hail also fell. The prevailing wind was S.S.W. A good deal of fog hung about the coast on Sunday and Monday. The rainfall at Greystones, County Wicklow, was 1·035 inches on two days. The mean temperature of this week was 73·1° in London, 71·8° at Cambridge, 71·5° at Oxford and Loughborough, 70·5° at Southampton, 70·3° in Manchester, and 70·1° even at Scarborough on the sea.

Opening with typical cyclonic conditions and rough, rainy weather, the week ended Saturday, the 26th, closed with equally well-marked anticyclonic conditions and fine, quiet weather. On Sunday morning a large depression was found off the N.W. of Scotland. This system had caused a heavy rainfall during the previous night in most parts of Ireland and in some parts of Scotland. A few hours later a much more serious disturbance advanced towards the N.W. of Ireland from the S.W., causing a renewed and still heavier rainfall and moderate to fresh gales from S., S.W., and W. at several exposed stations. By 8 a.m. of Monday the barometer was down to 28·90 inches in Donegal, and by 6 p.m. a minimal reading of 28·83 inches was reached at Wick, in Caithnessshire. During the next three days the arrival of several shallow secondary depressions kept the weather in an unsettled, showery state. On Thursday, however, an area of high pressure began to spread over our south-western districts and the N.W. of France, and this brought cool, dry N.W. winds and finer and brighter weather. Towards the close of the period the nights became very sharp, the thermometer in the screen falling on Friday night to 47·9° in Dublin; 46·0 in London, as well as at Wick, Belmullet, and Oxford; and 41·0° at Parsonstown. In Dublin the grass minimum was 41·7°. In Dublin the mean height of the barometer was 29·887 inches, pressure ranging from 29·290 inches at 9 a.m. of Monday (wind, W.S.W.) to 30·343 inches at 9 a.m. of Saturday (wind, N.W.). The corrected mean temperature was 59·6°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 57·9°. On Sunday the thermometer rose to 68·6°; on Saturday it fell to 47·9°. The mean temperature was 8·3° lower than that of the previous week. Rain was measured on four days to the amount of ·718 inch, ·390 inch being entered on Sunday. The prevailing winds were first S.W., then N.W.

The last five days of the month were uneventful but favourable. An anticyclone of considerable intensity for the time of year lay throughout over Ireland and the Atlantic to the westward of this country. The weather was at first bright and cool, with northerly winds; but the sky afterwards became densely clouded, and on Thursday, the 31st, some rain fell with a N.W. wind. Temperature showed some recovery on this the closing day of the month.

The rainfall in Dublin during the eight months ending August 31st amounted to 14·379 inches on 108 days compared with 9·455 inches on 96 days during the same period in 1887, 17·264 inches on 121 days in 1888, 18·893 inches on 134 days in 1889, 18·386 inches on 137 days in 1890, 15·888 inches on 117 days in 1891, 17·279 inches on 131 days in 1892, and a 25 years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August, 1893, was 3·275 inches, distributed over 16 days. Of this quantity ·690 inch fell on the 19th. The total fall since January 1 amounts to 16·341 inches on 106 days, compared with 21·296 inches on 108 days in 1892.

SEPTEMBER.—September, 1893, was favourable throughout. It was a month of average temperature, with fresh westerly and north-westerly winds, and frequent showers, but no heavy rains near

Dublin. At times the nights were very sharp, and even frosty, but, on the other hand, much bright sunshine was enjoyed by day. Towards the close the autumnal tints in the foliage were lovely beyond compare.

In Dublin the arithmetical mean temperature (55·9°) was as nearly as possible equal to the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 54·8°. In the twenty-eight years ending with 1892, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T.=61·4°). In 1880, the M. T. was as high as 58·6°; in 1879 (the "cold year"), it was 54·3°; in 1887, 54·0°; in 1888, 54·4°; in 1889, 55·8°, or exactly the average; in 1890, it was as high as 59·6°; in 1891, it was 57·6°, and in 1892, 54·5°. So warm a September as that of 1890 had not occurred for a quarter of a century.

The mean height of the barometer was 29·848 inches, or 0·062 inch below the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·345 inches at 9 a.m. of the 12th, and fell to 29·052 inches at 9 a.m. of the 29th. The observed range of atmospherical pressure was, therefore, 1·293 inches—that is, a little more than one inch and a quarter.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 54·8°, or as much as 6·5° below the value for August, 1893. Using the formula, *Mean Temp.* $=min.+(max.-min.\times\cdot476)$, the mean temperature was 55·5°, or exactly equal to the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 55·9°, compared with a twenty-five years' average of 55·8°. On the 5th, the thermometer in the screen rose to 72·0°—wind, S.S.W.; on the 21st the temperature fell to 38·2°—wind, N.W. The minimum on the grass was 31·7° on the 24th. On the 21st the grass minimum was 31·9°.

The rainfall was only ·729 inch, distributed over as many as 14 days—the rainfall was thus considerably below the average. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall in this month was very large—4·048 inches on, however, only 13 days. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1888, the rainfall was only ·728 inch on 10 days; in 1889, 1·043 inches fell on 13 days; in 1890, 2·469 inches on 14 days; in 1891, 2·132 inches on 18 days; and in 1892, 2·631 inches on 19 days.

High winds were noted on as many as 14 days, but attained the force of a gale on no occasion in Dublin. An aurora appeared on the 1st. Lightning was seen on the 8th and 21st. Thunder was heard on the 21st. The atmosphere was foggy on the 3rd, 4th, and 12th.

The month opened with an anticyclone forming over Ireland, where the weather during the first two days was mild and fine, although rather cloudy. In England rain had fallen, and the weather was taking up. In Scotland conditions were still unsettled and rainy. North-westerly winds were prevalent in nearly all parts of the United Kingdom.

During the week ended Saturday, the 9th, the weather, which was at first fair and warm, afterwards became cloudy, showery, squally, and finally cold for the time of year. On Sunday morning an anticyclone lay right over the British Islands, in all parts of which the barometer was high and remarkably uniform, the morning readings varying not one-tenth of an inch, from 30·30 inches at Loughborough, in Leicestershire, to 30·22 inches at Belmullet, in Mayo, and 30·21 inches at Valentia Island in Kerry. The weather was fair and bright after a calm, dewy and (in places) foggy morning. During the following two days the anticyclone retreated in a south-easterly direction to the Continent, and the barometer fell steadily. The wind meanwhile became S.W. in the North, and E. or S.E. in the South, temperature rising considerably on Tuesday—to 72° in Dublin and at Leith, 74° at York and Hurst Castle, 75° at Oxford, and 77° in London, at Loughborough and Cambridge. Wednesday was still hotter in the midlands and south of England, the thermometer reaching 80° at Cambridge and 81° in London; but already a decided fall of temperature had begun in Scotland and Ireland, and was spreading south-eastwards with clouds, rain, and high westerly winds. On Friday a V.-shaped thunderstorm depression travelled south-eastwards across Great Britain, and in its rear temperature gave way still more rapidly, so that Saturday was quite a cool day. In Dublin the mean atmospheric pressure was 29·914 inches, pressure ranging between 30·275 inches at 9 a.m. of Sunday (wind, E.N.E.), and 29·570 inches at 9 p.m. of Wednesday (wind, W.S.W.). The corrected mean temperature was 58·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·3°. On Tuesday the screened thermometers rose to 72·0°, on Saturday they fell to 44·0°. Rain was registered on three days, the total measurement being ·252 inch, of which ·174 inch was recorded on Wednesday. Sheet lightning was seen on the eastern horizon on Friday evening. The prevalent winds were S.W. and N.N.W.

The two most striking features in the weather of the week ended Saturday, 16th, are the low night temperatures at the beginning and the continuous drought, except in the north and the extreme south of the British Islands. During Sunday and Monday a depression was passing south-eastwards from the mouth of St. George's Channel across the Bay of Biscay to the Peninsula. This disturbance caused heavy rains in the extreme S.W. of England, along the west coast of France, and finally in central Spain. Its presence was made evident from Dublin on Saturday, the 9th, as well as throughout Sunday, by a sheet of cirriform cloud which kept travelling in an upper current from W. to E. over the southern half of the sky. A strong easterly wind at the same time showed that an area of low barometer lay to the southward. As this breeze died down, the nights became very sharp in England and Ireland. At Parsonstown the screened thermometer fell to 36° on Monday night and to 31° on Tuesday night. At Loughborough also the minimum on Monday night was 31°, or one degree below freezing-point. Large depressions now began to pass eastward across Northern Europe, so that for the rest of the week squally westerly (S.W. to N.W.) winds, high but variable temperatures, and cloudy skies—with heavy rain in the extreme north—were experienced. At Glencarron, in Ross-shire, the rainfall of this week was as much as 6 inches. In Dublin the mean height of the barometer was 30·146 inches, readings varying from 30·345 inches at 9 a.m. of Tuesday (wind calm), to 29·923 inches at 9 p.m. of Saturday (wind, N.W.). At 4 p.m. of this day a reading

of 29·892 inches was recorded. The corrected mean temperature was 56·9°. The mean dry bulb readings in the screen at 9 a.m. and 9 p.m. were 57·1°. On Tuesday the minimum was 40·5°, on Friday the maximum was 70·0°. Light showers fell on Friday evening, yielding only ·008 inch of rain. The prevalent winds were E., W.S.W., and N.W.

All through the week ended Saturday, the 23rd, the atmosphere was in a disturbed state over north-western Europe, and cyclonic conditions prevailed generally. On Tuesday and the two following days a depression of the first magnitude lay between Scotland and Norway, while a series of secondary depressions travelled south-eastwards across the British Islands, keeping the weather in a changeable, squally, showery condition, especially on our northern and north-western coasts. The amount of atmospherical depression may be gauged by the fact that on Tuesday the barometer fell to 28·76 inches at Sumburgh Head, in the Shetlands. On Wednesday evening sheet lightning was seen from the shores of the Irish Sea, St. George's Channel, and the English Channel. At night sharp frost occurred over central Ireland and in some inland parts of England also. At 8 a.m. of Thursday a thunderstorm prevailed in the Scilly Isles, connected with a large secondary depression which at that time lay over Brittany. On the evening of this day massive cumuli and nimbi were seen from the east coast of Ireland passing southwards down the Irish Sea—vivid flashes of lightning shot from these clouds from time to time, and distant thunder was heard at intervals. On Friday night another secondary depression brought a considerable rainfall, followed by a renewed fall of temperature and fresh northerly winds on Saturday. On Friday and Saturday showers of snow and sleet fell in Scotland and over the north of England. In Dublin the mean height of the barometer was 29·612 inches, readings decreasing from 29·832 inches at 9 a.m. of Sunday (wind, W.N.W.) to 29·330 inches at 3 p.m. of Tuesday (wind also W.N.W.), but rising again intermittently to 29·877 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 50·9°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 50·2°. On Monday the thermometer rose to 63·8° in the shade; on Thursday it fell to 38·2° in the shade and to 31·9° on the grass. The rainfall was ·191 inch on four days—·112 inch being measured on Friday. The wind was generally N.W., varying only between W. and N.

A cyclonic distribution of atmospherical pressure over western and northern Europe caused the weather to be of a changeable, showery, and squally character throughout the week ended Saturday, the 30th. At the beginning, no doubt, an anticyclone was found over Ireland in the rear of a depression overlying the Skager Rack, but this high pressure area soon gave place to a new disturbance, which at 8 a.m. of Tuesday had its centre over Donegal, Derry, and Antrim. This system travelled eastwards, causing heavy rain, first in the north of Ireland, afterwards in the north of England. Indeed, on Wednesday thunderstorms occurred generally along the east coast of England and at the Helder, in connection with this depression. By 8 a.m. of Thursday a very decided reduction of pressure was in progress all over the British Islands and Scandinavia, and a large and deep depression was approaching the N.W. of Scotland. The showers now became heavier and more frequent in nearly all places, while the wind blew more and more gustily and strongly from S.W. or W. At 8 a.m. of Friday the barometer was down to 28·65 inches at Stornoway in the Hebrides, where a fresh southerly breeze was blowing. The reading was 30·00 inches at Nice and 30·06 inches at Lisbon at the same hour. Gales prevailed at many exposed stations—from S.E. in Norway, but from S.W. or W. in the English Channel, and at Pembroke. The showery weather continued to the close of the week; but fine, bright intervals were enjoyed. In Dublin the mean height of the barometer was 29·619 inches, the range of pressure being from 30·079 inches at 9 a.m. of Sunday (wind, W.N.W.) to 29·052 inches at 9 a.m. of Friday (wind, W.S.W.). The corrected mean temperature was 54·2°. The mean daily dry bulb reading at 9 a.m. and 9 p.m. was 53·1°. On Sunday the thermometer fell to 38·9° in the shade; on Thursday it rose to 63·5°. Rain fell in measurable quantity on six days, the total precipitation being ·278 inch, of which ·060 inch was referred to Thursday. The prevailing winds were westerly (W.N.W to S.W.). Lunar rainbows were seen at Greystones, Co. Wicklow, on Thursday evening. Thunder and lightning occurred in many parts of Ireland in the course of the same night.

The rainfall in Dublin during the nine months ending September 30th amounted to 15·108 inches on 122 days, compared with 10·968 inches on 112 days during the same period in 1887, 17·992 inches on 131 days in 1888, 19·936 inches on 147 days in 1889, 20·855 inches on 151 days in 1890, 18·020 inches on 135 in 1891, 19·910 inches on 150 days in 1892, and a twenty-five years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, County Wicklow, the rainfall in September, 1893, was ·750 inch distributed over 12 days. Of this quantity ·150 inch fell on the 25th, and ·140 inch on the 6th. At that station the rainfall since January 1, 1893, has been 17·091 inches on 118 days, compared with 23·883 inches on 125 days in the same nine months of 1892.

At Cloneevin, Killiney, Co. Dublin, the rainfall in August, 1893, was 2·39 inches on 20 days (the maximal fall in 24 hours being ·37 inch on the 20th), compared with an eight years' average of 2·845 inches on 15·25 days. In September, 1893, only ·46 inch fell at Cloneevin on 11 days. The maximal fall in 24 hours was ·14 inch on the 6th. On an average of eight years the September rainfall at this station has been 1·767 inches on 12·5 days. Since January 1, 1893, 13·90 inches of rain have fallen at Cloneevin.

October.—A favourable month, of average mean temperature and atmospheric pressure. There was an overwhelming prevalence of westerly and south-westerly winds, which kept the rainfall far below the average on the leeward side of the Dublin and Wicklow mountains—thus, it was only 7·10 inch at both Greystones and Killiney; 1·033 inches in Dublin city; 1·140 inches at the Royal Botanic Gardens, Glasnevin; and 1·190 inches at the Ordnance Survey Office, Phœnix Park. Free of the mountains inland, the rainfall was much heavier. Even in London, not less than 3·900 inches of rain fell during the month. On the 20th and 21st there was a remarkable wave of heat. On the 30th and 31st the cold was equally decided.

In Dublin the arithmetical mean temperature (50·0°) was slightly above the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 48·8°. In the twenty-eight years ending with 1892, October was coldest in 1892 (M. T. = 44·8°), in 1880 (M. T. = 45·4°), and in 1885 (M. T. = 45·5°), and warmest in 1876 (M. T. = 53·1°). In 1886, the M. T. was as high as 52·0°; in 1879 (the "cold year"), it was 49·7°; in 1887, as low as 47·3°; in 1888, it was 49·1°; in 1889, it was only 48·1°; in 1890, it was 51·7°, and in 1891, it was 49·5°. October, 1892, beat the record for coldness, but October, 1893, has proved of normal warmth.

The mean height of the barometer was 29·855 inches, or 0·015 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·507 inches at 9 a.m. of the 23rd, and fell to 29·061 inches at 9 a.m. of the 4th. The observed range of atmospherical pressure was, therefore, as much as 1·446 inches—that is, a little less than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 48·8°, or 6·0° below the value for September. The arithmetical mean of the maximal and minimal readings was 50·0°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the value was 49·8°, or 0·3° above the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865-89, inclusive, (49·5°). On the 21st, the thermometer in the screen rose to 67·7°—wind, S.W.; on the 31st the temperature fell to 31·7°—wind, N.W. The minimum on the grass was 24·9°, also on the 31st. On one night the thermometer sank below 32° in the screen, and on eight nights frost occurred on the grass. The corresponding figures in 1892 were 4 and 13 nights respectively.

The rainfall was only 1·033 inch, distributed over 16 days—the rainfall was considerably, while the rainy days were slightly, below the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·834 inch on but 14 days, and in 1868 only ·856 inch on 15 days. In 1888, the rainfall was 1·227 inches on 16 days, and in 1889 no less than 4·853 inches fell on 22 days. In 1891, 3·590 inches fell on 13 days; and in 1892, 2·535 inches on 17 days. From these figures it will be seen that October, 1890, proved the driest on record for more than a quarter of a century at least, while the rainfall in October, 1893, was only *one-third* of the average.

A lunar corona was seen on the 24th. There was an aurora borealis on the evening of the 29th. High winds were noted on 10 days, and attained the force of a gale on two occasions—the 25th and 28th. The atmosphere was more or less foggy in Dublin on the 7th, 18th, and 20th. Lightning was seen on the evenings of the 3rd, 4th, 5th, and 30th. Hail fell on the 26th.

The week ended Saturday, the 7th, proved to be one of low atmospherical pressure, low temperature, and changeable showery weather, the showers being from time to time accompanied by thunder and lightning in many places. The most important reduction of pressure occurred on Tuesday and Wednesday—at 8 a.m. of the latter day the barometer was below 29 inches throughout a large triangular area covering two-thirds of Scotland, the north of England, and the north-eastern third of Ireland. Gradients were nowhere steep, and so the winds—although varying much in direction—were not strong except off the south of Ireland and in the English Channel. Connected with this large primary cyclonic system, were a number of shallow secondary depressions, which caused thunder and hail—as well as rain—showers as they passed across the country. Temperature was not so low in the S. and S.E. of England as in other parts of the kingdom, and on Sunday the thermometer rose to 67° at Loughborough and Cambridge, 66° in London and at Dungeness, and 65° at Hurst Castle. On the other hand, a minimum of 28° was registered at Nairn, in Scotland, on Wednesday morning. In Dublin the mean height of the barometer was 29·362 inches, pressure being observed to vary between 29·624 inches, at 9 p.m. of Sunday (wind, W.), and 29·061 inches, at 9 a.m. of Wednesday (wind also W.). The corrected mean temperature was 49·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 47·2°. On Sunday the thermometer rose to 59·2°, on Saturday it fell to 37·9° in the screen. The rainfall was ·168 inch on five days, ·051 inch being measured on Wednesday. Lightning was seen on the evenings of Tuesday, Wednesday, and Thursday. The prevailing wind was westerly. The weather was much more broken in England than in Ireland during the week.

Atmospherical pressure was unsteady during the week ended Saturday, the 14th, and therefore the weather was unsettled and changeable. Until Friday, when a very warm, moist south-westerly, or equatorial current began to pass over Ireland, the air was cold and rather dry in this country. In England, on the contrary, heavy falls of rain took place, accompanied by thunder and lightning and at times by strong and squally S.W. winds. In London, from one inch to an inch and a quarter of rain fell on Monday night, and the total fall for the three days ending 8 a.m. of Thursday was no less than 1·84 inches. These heavy rains were due to the passage up the English Channel of two depressions in quick succession—one on Monday, the other on Wednesday. At this time, although the barometer was rather low, bright, sharp weather prevailed in Ireland, showers occurring at intervals. On Thursday an area of high pressure passed over this country. The weather turned colder and became fine and dry in England, while in Ireland a warm S.W. wind arrived on Friday, causing dull, rainy weather, and an increase of temperature amounting to from 20° to 25° Fahr. The result in Dublin was that on Saturday the interior of most houses became dripping wet, from the condensation as dew of the vapour of the warm air current upon the walls, ceilings, and floors, chilled by the previous cold weather and remaining below the point of saturation or the dew point. Rain fell heavily on Saturday afternoon. In Dublin the mean height of the barometer was 29·846 inches, pressure ranging between 29·683 inches at 9 a.m. of Sunday (wind, W.), and 30·160 inches at 9 p.m. of Thursday (wind, W.N.W.). The corrected mean temperature was 48·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was also 48·8°. On Tuesday the thermometers in the screen fell to 37·1°, on Saturday they rose to 65·0°. The rainfall was ·431 inch on three days, ·322 inch being measured on Saturday. The prevalent winds were W. and S.W.

Taken as a whole, the weather of the week ended Saturday, the 21st, was distinctly favourable and of a mild type—indeed, both of the beginning and at the end temperature was much above normal, although the minima were low on Tuesday night in Scotland and parts of both England and Ireland, and on Wednesday and Thursday nights in central England. On the other hand, Friday night proved abnormally warm in many places, and in Dublin the thermometer actually rose to 67·7° (nearly 68°) in the screen. Comparatively little rain fell, except in the south of Ireland and over the south and east of England as well as in parts of the English Midlands on Tuesday, when a shallow depression travelled in a direction from W.N.W. to E.S.E. from the mouth of St. George's Channel across the S.W. of England to the N.E. of France. This rain-system caused falls of 1·25 inches at Roche's Point, 1·57 inches at Hurst Castle, where a storm of thunder and lightning occurred at 1.30 a.m. of Wednesday, and ·75 inch in London. The rainfall was ·67 inch at Parsonstown, but only ·07 inch in Dublin. As this disturbance passed off, an anticyclone formed in the S., and the barometer rose to 30·40 inches or slightly more on Friday morning over the S. of England, N. of France, and centre of Germany. Along the north-western face of this anticyclone a very warm south-westerly current spread over Ireland on Friday, the temperature becoming singularly high at night. Saturday was first fine and warm, afterwards rainy and much cooler. In Dublin the mean height of the barometer was 30·099 inches, pressure ranging between a minimum of 29·762 inches at 9 p.m. of Sunday (wind, W.S.W.) and 30·370 inches at 9 a.m. of Thursday (wind, S.W.). The corrected mean temperature was 55·4°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 54·5°. On Saturday the thermometers in the screen rose to 67·7°; on Wednesday they fell to 41·0°. The rainfall was ·238 inch on four days, ·098 inch being measured on Saturday. The prevailing winds were W. and S.W. A wet fog prevailed on Wednesday morning, and there was a smoke fog on Friday.

At first fine and dry, except in the S. and S.E. of England, where Sunday was dull and rainy, the weather afterwards became squally, showery, and generally changeable during the week ended Saturday the 28th. In the earlier period, an anticyclone lay over the S. of Ireland, the barometer rising on Monday morning to 30·55 inches at Valentia Island and Roche's Point, 30·52 inches at Parsonstown, and 30·51 inches in Dublin. This high pressure system soon moved away south-eastwards, and at the same time decreased in size. Simultaneously, a general reduction of atmospheric pressure took place in the N. and N.W., causing steeper gradients for westerly winds—that is, winds between S.W. and N.W., and showery, unsettled weather. On Tuesday and Wednesday rain fell heavily over the N. of Ireland and S. of Scotland, and in smaller quantities over the greater part of the kingdom. Hail fell in many places and lightning was seen at Belmullet on Wednesday night. On Thursday evening the moon shone with unusual lustre. A decided rise of temperature occurred on Friday, while Saturday was stormy with frequent showers, and, at times, rainbows. In Dublin the mean height of the barometer was 30·038 inches, pressure rising to 30·507 inches at 9 a.m. of Monday (wind, W.) and falling to 29·638 inches at 4 p.m. of Saturday (wind, W.). The corrected mean temperature was 49·6°. The mean of the dry bulb readings at 9 a.m. and 9 p.m. was 49·2°. On Wednesday the thermometer rose to 59·8° in the screen; on Friday, it fell to 38·2°. The rainfall was ·184 inch on three days—·109 inch being registered on Wednesday and ·041 inch on Saturday. The prevailing wind was westerly.

The last three days were cool and fair in Ireland—an aurora borealis with carmine streamers was seen about 6 p.m. of Sunday, the 29th, and there was sheet lightning on the evening of the 30th. Sharp frost occurred on the 31st.

The rainfall in Dublin during the ten months ending October 31st amounted to 16·141 inches on 138 days, compared with 12·366 inches on 123 days during the same period in 1887, 19·219 inches on 147 days in 1888, 24·789 inches on 169 days in 1889, 21·494 inches on 162 days in 1890, 21·610 inches on 148 days in 1891, 22·445 inches on 167 days in 1892, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in October amounted to only ·710 inch on 15 days. Of this quantity ·225 inch fell on the 17th. The rainfall at Greystones in October, 1889 was no less than 6·935 inches on 22 days, or more than 11 times as great as the fall in October, 1890, when only ·600 inch fell on 13 days. In 1891, 5·122 inches fell on 14 days, and in 1892, 3·340 inches on 15 days. From January 1st, 1893, up to October 31st, rain fell at Knockdolian on 133 days to the total amount of 17·801 inches. In 1892, the rainfall of the corresponding ten months was 27·223 inches on 140 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in October, was ·710 inch on 14 days, compared with 3·040 inches on 17 days in 1892, and an eight years' average of 3·201 inches on 16 days. Since January 1, 1893, 14·61 inches of rain have fallen at this station, compared with an average of 20·353 inches in the previous eight years.

NOVEMBER.—This was a generally favourable month. Its leading characteristics were—a prevalence of northerly winds, a tolerably low mean temperature, an absence of calm and fog, a moderate rainfall, but a high percentage of cloud.

The memorable storm of the period from the 16th to the 19th inclusive deserves special mention. The cyclonic depression which caused it was of great intensity, the barometer falling in its centre to about 28·5 inches on the morning of the 17th, and the system pursued a very erratic course, travelling in the first instance from S.S.W. to N.N.E., across Ireland and Scotland to the Moray Firth, and then "turning tail" and passing in a south-easterly direction down the east coast of Great Britain to the continent, over which it finally dispersed. The wind-velocity during the northerly gales of this depression was great everywhere, but it was altogether exceptional at Holyhead, where the anemometer registered 1,824 miles of wind in 24 hours, and in the hour 10.30 a.m. to 11.30 a.m. 89 miles were recorded.

A slight shock of earthquake was felt at Greystones, Co. Wicklow, at 5.35 p.m. of the 2nd.

In Dublin the arithmetical mean temperature (43·8°) was decidedly below the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·3°. In the twenty-eight years ending with 1892, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), and warmest in 1881 (M. T. = 50·3°). In 1886, the M. T. was as high as 46·4°; in the year 1879 (the "cold year") it was 43·9°; in 1887, it was as low as 42·6°; in 1888, it was as high as 47·5°; in 1889, it was 46·4°; in 1890, 45·3°; in 1891, 43·4°; and in 1892, as high as 46·9°.

The mean height of the barometer was 30·058 inches, or 0·198 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·594 inches at noon of the 21st, having fallen to 28·719 inches at midnight of the 16th. The observed range of atmospherical pressure was, therefore, 1·875 inches—that is, slightly less than one inch and nine-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·3°, or 5·5° below the value for October, and 11·5° below that for September, 1893. The arithmetical mean of the maximal and minimal readings was 43·8°, compared with a twenty-five years' average of 44·7°. On the 3rd the thermometer in the screen rose to 57·6°—wind, W.S.W.; on the 7th the temperature fell to 30·8°—wind, calm. The minimum on the grass was 23·9°, also on the 7th.

The rainfall was 1·870 inches, distributed over 17 days—the rainfall was considerably below, while the rainy days were exactly equal to the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1876 the rainfall in November was large—3·614 inches on 20 days; in 1872, also, 3·414 inches fell on 24 days; in 1887, 3·012 inches fell on 18 days; in 1888, 6·549 inches fell on 26 days; in 1890, 4·212 inches fell on no less than 27 days; in 1891, 2·911 inches fell on 15 days, and in 1892, 2·404 inches on 19 days. On the other hand, the rainfall in 1889 was only ·929 inch on 9 days; in 1870, only 1·218 inches were measured on but 11 days, and in 1879, only 1·251 inches on but 10 days.

High winds were noted on 15 days, but attained the force of a gale on only four occasions—the 16th, 17th, 18th, and 29th. The atmosphere was more or less foggy in Dublin on the 4th, 7th, 13th, 14th, and 30th.

A lunar halo was seen on the 21st. Snow or sleet fell on the 6th, 18th, 19th, and 23rd; hail on the 6th, 7th, 19th, 22nd, and 23rd.

With the coming of November, as in 1892, so in 1893, cold frosty weather gave place to comparative warmth and south-westerly winds. A severe frost had visited central England early on Tuesday evening, October 31, but in the course of the following night temperature rose with extreme rapidity, so that Parsonstown was 21° warmer at 8 a.m. on Wednesday, the 1st, than it had been 24 hours previously. On Thursday a secondary V-shaped depression crossed England from W. to E., causing a copious rainfall. Friday was a cloudy, mild, breezy day, but on Saturday a shift of wind to N.E. took place, and the air became drier and colder.

During the week ended Saturday, the 11th, showery, cloudy, and generally changeable weather, with north-easterly winds, prevailed. After Sunday an anticyclone was constantly found to the northwestward of the British Islands, while atmospherical pressure was relatively low both over the Baltic and over the Mediterranean Basin. At first areas of particularly sharp cold were found over the central districts of both England and Ireland—at 8 a.m. of Sunday the thermometer was as low as 22° at Loughborough and 25° at Cambridge and Parsonstown. At the first-named station it had been down to 19° during the previous night. In Dublin this day was fine, dry, and cold, but on Monday morning heavy showers of hail, sleet, and snow came up on a N.E. wind. In the neighbourhood of Stillorgan, Co. Dublin, some three inches of snow lay on the ground to an advanced hour in the forenoon. The frost continued inland, where also the weather remained dry. As usual in N.E. winds, the weather was most severe and broken in the extreme S.E. of England, where thunder and lightning accompanied sharp showers of cold rain and hail on Monday and Tuesday. After Wednesday temperature recovered, although the N.E. wind even freshened, and Saturday proved the mildest day of the whole week. In Dublin the mean height of the barometer was 30·344 inches, pressure ranging from 29·961 inches at 9 a.m. of Sunday (wind, W.N.W.) to 30·465 inches at 9 a.m. of Wednesday (wind, N.N.E.). The corrected mean temperature was 42·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 42·3°. On Tuesday the minimum was 30·8°, on Saturday the maximum was 50·7°. Rain fell on five days in frequent but not heavy showers, the maximal fall in 24 hours being ·049 inch on Wednesday, and the total fall amounting to ·162 inch. Hail, sleet, and snow fell on Monday morning.

The weather during the week ended Saturday, the 18th, was at first anticyclonic, quiet, and fair, but it afterwards fell into a most unsettled stormy condition, severe gales from opposite quarters blowing on the last three days of the week. At the beginning an anticyclone lay over the British Islands, the North Sea, Holland, and North Germany—the barometer slightly exceeded 30·50 inches in the N.E. of Scotland. On Monday beautiful weather prevailed, but already a depression was advancing northwards across Spain and the Bay of Biscay. This system finally passed up the English Channel on Tuesday, and caused heavy rain both in France and in the S. and S.E. of England —·720 inch of rain fell in London, while Dublin got only ·009 inch in the form of a drizzle on Tuesday evening. Wednesday proved fine and dry, but at night the wind veered from E. to S.E., and freshened in front of a very deep depression, which on Thursday night passed directly over Ireland, travelling in a north-north-easterly direction. This disturbance brought a heavy rainfall to the Irish and Scotch stations—·821 inch fell in Dublin up to 9 a.m. of Friday, the heaviest fall in this city since July 12, when ·871 inch fell in two thunderstorms. About midnight on Thursday the barometer read 28·719 inches, the lowest reading recorded in Dublin since October 13, 1891, when the mercury fell to 28·251 inches. In front of the cyclonic centre a fresh S.E. gale and high temperature prevailed; in its rear came a violent N. storm and bitter cold on Saturday, when also

the depression changed its course and travelled southwards down the North Sea. In Dublin the mean height of the barometer was 29·740 inches, pressure ranging between 30·382 inches at 9 a.m. of Sunday (wind, E.), and 28·719 inches at midnight of Thursday (wind, S.). The corrected mean temperature was 43·0°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 42·2°. On Friday the thermometers in the screen rose to 55·1°, having fallen to 34·4° on Tuesday. The rainfall amounted to ·954 inch on three days—·821 inch being registered on Thursday. Snow showers fell on Saturday afternoon. The prevailing winds were E.S.E. and N.W. At Holyhead a gale from N. of hurricane force was reported on Saturday morning.

Changeable and unsettled weather held during the week ended Saturday, the 25th. At first, bitter northerly gales and showers of snow and hail prevailed in connection with the deep depression which had travelled northwards and then southwards across the British Islands in the closing days of the previous week. As the centre of this disturbance reached the Continent on Sunday morning, the barometer rose with great rapidity over the United Kingdom, so that gradients for northerly winds became excessively steep. The result was a disastrous northerly gale, which strewed the coasts of North-western Europe with wrecks and wreckage. The rise of the barometer continued until Tuesday morning, when the reading was 30·63 inches at Belmullet. Depressions then began to pass eastwards over Northern Europe, with their secondaries spreading south-eastwards over the British Islands, where showers of hail, sleet, or snow again fell plentifully at exposed stations. During Friday and Saturday a deep depression passed directly over our area, causing mild, damp, squally weather and a general fall of rain. The week closed with a finer and clearer state of the atmosphere. In Dublin the mean height of the barometer was 30·212 inches, pressure ranging from 30·594 inches at noon on Tuesday (wind, N.) to 29·457 inches at 9 p.m. of Saturday (wind, W.N.W.), The corrected mean temperature was 41·1°, which was also the value of the mean dry bulb readings at 9 a.m. and 9 p.m. On Thursday the screened thermometers fell to 31·7°, on Saturday they rose to 52·9°. Rain fell in registrable quantity on four days to the total amount of ·214 inch, ·162 inch being measured on Saturday. Snow and hail fell on Sunday and Thursday, hail on Wednesday also. The prevailing winds were N.E. and N.W.

The period from Sunday, the 26th, to Thursday, the 30th, inclusive, was chiefly remarkable for the sudden and extreme changes of temperature which occurred at its beginning and close. On the 26th, the thermometer stood low under the influence of a fresh northerly wind, forming part of the circulation round a depression whose centre had advanced from the N. of Scotland to Denmark by 8 a.m. Monday, the 27th, brought milder, damper weather and freshening westerly winds. The next two days were warm, but blustering, with a good deal of cloud, and squally W.S.W. winds. Rain fell at exposed stations, most heavily in Scotland. In the course of the night of the 29th–30th rain set in afresh, and the wind shifted to the northward, in the rere of a series of V-shaped depressions, which subsequently travelled towards S.E. across North-western Europe. A rapid fall of temperature followed beginning in the far N., and quickly extending southwards. In Dublin the mean height of the barometer during this closing period of the month was 30·054 inches, pressure varying from 30·289 inches at 9 a.m. of Monday (wind, W.) to 29·829 inches at 9 p.m. of Thursday (wind N.N.W.). The corrected mean temperature of the 5 days was 47·6°, the mean dry bulb temperature at 9 a.m. and 9 p.m. being 46·2°. On Sunday, the screened thermometer fell to 36·9°; on Tuesday it rose to 56·5°. Rain fell on the 29th to the amount of ·144 inch; on the 30th to the amount of ·143 inch; total precipitation, ·287 inch. The prevalent winds were N.N.W. and W.S.W.

The rainfall in Dublin during the eleven months ending November 30th amounted to 18·011 inches on 155 days, compared with 15·378 inches on 141 days during the same period in 1887, 25·768 inches on 173 days in 1888, 25·718 inches on 178 days in 1889, 25·706 inches on 189 days in 1890, 24·521 inches on 163 days in 1891, 24·849 inches on 186 days in 1892, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November, 1893, was 1·785 inches, distributed over 17 days. Of this quantity ·320 of an inch fell on the 17th, and ·310 of an inch on the 30th.

From January 1st, 1893, up to November 30th, rain fell at Knockdolian, Greystones, on 150 days, and to the total amount of 19·586 inches.

At Cloneevin, Killiney, Co. Dublin, 1·40 inches of rain fell on 17 days, compared with an eight years' average of 3·048 inches on 18·25 days. The maximal fall in 24 hours was ·31 inch on the 16th. Since January 1st, 1893, 16·01 inches of rain have fallen at this station, compared with an eight years' average of 23·401 inches.

DECEMBER.—A generally open, rainy, squally month. The prevailing trend of the atmospheric depressions was from S.W. to N.E. along the western shores of the British Isles and of Scandinavia. At the close of the month an anticyclone spread westwards from the Continent to the British Isles, and was accompanied by an abrupt fall of temperature, much cloud and fog. The rainfall of the whole month (2·482 inches) was above the average. Several serious gales were felt, but calms with fog prevailed during the closing days of the month.

In Dublin the arithmetical mean temperature (43·5°) was decidedly above the average (41·3°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 42·8°. In the twenty-eight years ending with 1892, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest in 1865 (M. T. = 46·2°). In 1886 the M. T. was as low as 37·9°; in the year 1879 (the "cold year") it was also 37·9°. In 1887 the M. T. was 39·9°; in 1888 43·6°; in 1889 43·8°; in 1890 39·2°; in 1891, 43·0°; and in 1892 39·6°.

The mean height of the barometer was 29·868 inches, or 0·013 inch below the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·706 inches at 9 a.m. of the 30th, and fell to 28·530 inches at noon of the 10th. The observed range of atmospheric pressure was, therefore, no less than 2·176 inches—that is, a little less than two inches and two-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 42·8°, or only 0·5° below the value for November, and 6·0° below that for October, 1893. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 43·7°, or 2·2° above the average mean temperature for December, calculated in the same way, in the twenty-five years 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 43·5°, compared with a twenty-five years' average of 41·3°. On the 15th the thermometer in the screen rose to 56·7°—wind, S.W.; on the 2nd the temperature fell to 28·3°—wind, W.N.W. The minimum on the grass was 23·0° also on the 2nd. There were only 3 days of frost in the screen and 16 days of frost on the grass.

The rainfall was 2·482 inches, distributed over as many as 19 days. The average rainfall for December in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, and the rainy days were above the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year) 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; and in 1871 the December rainfall was only ·797 inch on 15 days. In 1885, only ·742 inch of rain was measured on but 10 days, but in 1886 the rainfall was 3·348 inches, distributed over as many as 21 days. In 1887 (the "dry year"), the rainfall was 1·223 inches on 19 days; in 1888, 2·911 inches on 17 days; in 1889, 1·554 inches on 15 days; in 1890, 1·856 inches on 11 days, in 1891, 3·299 inches on 21 days; and in 1892, only ·795 inch on 10 days.

Lunar halos appeared on the 14th and 18th. High winds were noted on 17 days, and attained the force of a gale on five occasions—the 6th, 8th, 10th, 15th, and the 19th. The atmosphere was more or less foggy in Dublin on the 2nd, 17th, 27th, 28th, 29th, 30th, and 31st. Neither snow nor sleet fell in Dublin, although the mountains were covered with snow on the 18th and 20th. Hail fell on the 13th. Thunder and lightning occurred on the 8th.

Cold, bright weather prevailed during the two days of the month, especially in Ireland, where an anticyclone of considerable intensity formed on Friday, the 1st, in the wake of two depressions which had passed south-eastwards across Western Europe immediately before. The frost in Scotland was very sharp on the morning of the 1st, and the wave of cold travelled southwards, so that at 8 a.m. of the 2nd the thermometer read only 17° at Loughborough.

As regards the week ended Saturday, the 9th, at first the weather was mild and damp in Ireland, rainy in Scotland, very frosty in the S. and S.E. of England. Thus at 8 a.m. of Sunday the thermometer registered 49° at Belmullet, 48° at Stornoway, in the Hebrides, where 1·2 inches of rain had fallen in the previous 24 hours; but only 21 in London. An anticyclone in which the barometer exceeded 30·5 inches, lay over the S.W. of Ireland; but a cyclonic system was skirting the north coast of Scotland. On Tuesday the barometer gave way quickly as a series of large and deep atmospheric depressions began to encroach on the shores of the North-west of Europe from the Atlantic. These, as is usual, brought unsettled weather, high but unsteady temperatures, gales and rains, to the greater part of the British Isles. On Thursday night a depression of exceptional magnitude rapidly passed northeastwards outside the north-west and north coasts of Ireland. The barometer fell to 28·27 inches at Malin Head on Friday morning, and to 27·97 inches at Stornoway at 4 p.m. of the same day. During the preceding night strong S.W. and W.S.W. gales and thunder and hail showers prevailed at many stations, and these were renewed in the course of Friday afternoon. At Navan, Co. Meath, lumps of ice fell in a thunder-shower towards evening. At night lightning was seen on the N.W. horizon from Dublin. Saturday was a bright, cold day and the week closed with a promise of frost, which, however, was not fulfilled. In Dublin the mean height of the barometer was 29·817 inches. Pressure varied from 30·393 inches at 9 a.m. of Sunday (wind, W.), to 28·937 inches at 7.30 a.m. of Friday (wind, W.S.W.). The corrected mean temperature was 44·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 44·1°. On Sunday the screened thermometers sank to 33·7°, on Wednesday they rose to 53·1°. The rainfall amounted to ·352 inch on three days. The maximal fall in 24 hours was ·179 inch on Thursday. The prevalent winds were W.N.W., W., and W.S.W.

Atmospheric pressure and temperature were in a most unstable condition throughout the N. and W. of Europe and over the adjoining parts of the North Atlantic during the week ended Saturday, the 16th. Consequently, the weather was extremely unsettled, strong southerly and south-westerly gales prevailed, and heavy rainfalls occurred on all exposed coasts. On Sunday a very deep depression advanced northeastwards over Ireland. Strong S.E. to S.W. gales blew and heavy rain fell on the S. and E. coasts and over the Irish Sea during the forenoon. In Dublin the barometer fell to 28·530 inches about midday. During the next two days a number of subsidiary depressions crossed England, keeping the weather unsettled and showery. A thunderstorm occurred at Valentia Island on Monday night, and lightning was seen over the North Channel at the same time. Early on Wednesday morning a new and very deep depression was found over Central Ireland, where the barometer scarcely exceeded 28·5 inches (28·52 inches at Parsonstown, King's Co.). As pressure was at this time everywhere low, no serious gales followed, but rain fell abundantly in nearly all parts of the United Kingdom. A singularly rapid recovery of atmospheric pressure ensued, so that the Thursday morning readings exceeded those of Wednesday morning by 1·31 inches at Parsonstown, 1·29 inches in Dublin and at Valentia, and 1·22 inches at Roche's Point, Co. Cork. An anticyclone now formed over France, where temperature fell fast; but strong S.W. winds and gales, and high readings of the thermometer were reported from Ireland, Scotland, and many parts of England on both Friday and Saturday. In Dublin the mean atmospheric pressure was 29·537 inches, the barometer ranging between 28·568 inches at 9 a.m. of Wednesday (wind, S.S.W.) and 30·218 inches at 1 a.m. of Saturday (wind, S.W). The corrected mean temperature was 43·5°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·1°. On Friday the screened thermometers rose to 56·7°, having fallen to

32·8° the previous day. The rainfall was ·862 inch on five days, ·460 inch being measured on Tuesday and ·351 inch on Sunday. The prevalent wind was S.W. Gales occurred from S.E. on Sunday, and from S.W. on Friday.

Throughout the week ended Saturday, the 23rd, atmospheric pressure remained in a very disturbed condition, rain fell frequently—in Ireland and Scotland in particular—and blustering S.W. and W. winds or gales were very prevalent, especially from Tuesday to Friday inclusive. The barometer stood highest for the most part over the Peninsula and Central Europe, lowest off our extreme W. and N.W. coasts. Hence, the winds were strong from S.W. and W. Sunday was fine, bright, and mild, but rain fell at night. Monday was colder, and snow lay on the higher ranges of the Dublin Mountains. The barometer fell fast during the ensuing night, and the wind rose to a gale from S. At 8 a.m. of Tuesday the barometer was down to 28·80 inches at Belmullet, in Mayo. In the course of Tuesday night a still deeper secondary depression advanced to St. George's Channel from the S.W., the barometer reading only 28·60 inches at Pembroke and 28·64 inches at Roche's Point at 8 a.m. of Wednesday. This low pressure system brought with it gales and heavy rains—a strong S.W. gale being felt in the S. of England and a violent N.W. gale over the western parts of the English Channel. Hail fell in the W. and N. of Ireland and thunder occurred at Ardrossan. Thursday was a fine, bright day, but on Friday forenoon another rainfall occurred in Ireland. This was followed by a beautiful day, with which the week closed. In Dublin the mean height of the barometer was only 29·562 inches, pressure ranging between 30·166 inches at 9 a.m. of Sunday (wind, S. by W.), and 28·784 inches at 9 a.m. of Wednesday (wind, N.N.E.). The corrected mean temperature was 44·0°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 43·0°. On Thursday the thermometers sank to 34·9°; on Friday they rose to 52·8°, in the screen. The prevailing direction of the wind was S.W. Rain fell on each day of the week to the total amount of ·683 inch, ·256 inch being measured on Tuesday.

The week ended Saturday, the 30th, witnessed the gradual substitution of anticyclonic for cyclonic conditions over the extreme West of Europe, and the consequent dying out of the strong, squally S.W. winds which had so long been blowing. It also saw the establishment of calms and fogs, as well as a general and decided fall of temperature towards the close of the period. At the beginning, depressions skirted the west coasts of Ireland and Scotland, and rain fell heavily in these countries and in smaller quantities over England. On Sunday a warm, bright morning was followed by a downpour of rain in Dublin, where the measurement was just half an inch. Christmas Day (Monday) was finer and cooler, but sharp showers fell shortly after midday in this city. A succession of mild dull, damp days followed, and in London dense dark fogs prevailed on Wednesday and the next two days. By Saturday, however, an anticyclone of great size and intensity had been fully established over central and western Europe and the weather brightened and became much colder. At 8 a.m. of Friday the barometer stood at 30·79 inches over the North of Germany, and the thermometer was as low as 2° F. at Munich, having fallen there 29° in the previous twenty-four hours. On Friday evening barometer rose to 30·86 inches in Berlin. Sharp frost held in Germany, France, and the centre of England on Saturday. In Dublin the mean height of the barometer was 30·319 inches, pressure ranging between 29·641 inches at 9 p.m. of Sunday (wind, W.S.W.) and 30·706 inches at 9 a.m. of Saturday (wind, S.). The corrected mean temperature was 46·4°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 45·4°. On Sunday the maximum in the shade was 55·8°; on Saturday the minimum was 35·9°. Rain fell on four days to the total amount of ·585 inch; ·499 inch being measured on Sunday. The prevailing winds were southwesterly.

Sunday, the 31st, was a raw, damp, very cold day in Dublin. In the morning a dense vapour-fog prevailed, and as the thermometer stood below freezing point thick rime was deposited on trees and shrubs. On this day the distribution of both atmospheric pressure and temperature over Western Europe was peculiar. An anticyclone had its centre over the southern half of Ireland, the barometer reading 30·63 inches at 8 a.m. at Parsonstown. A deep depression was at the same moment travelling eastwards across the north of Russia, the barometer being as low as 28·60 inches at Archangel. The thermometer at the hour named read 46° at Malin Head, but only 31° at Valentia Island in Kerry and 27° at Parsonstown. Dublin was 11° colder than Holyhead. At Nairn, in the N.E. of Scotland, the temperature was 49°, in Paris it was 18°, or 31° lower. On the Christiania Fjord it was 42°, at Biarritz 28°, and at Munich 1°. Scilly was 20° warmer than London (44° compared with 42°), and Stockholm was 9° warmer than Nice (37° against 28°).

The rainfall in Dublin during the year ending December 31st amounted to only 20·493 inches on 174 days, compared with 25·644 inches on 196 days in 1892, 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a 25 years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1893, was 2·940 inches, distributed over 20 days. Of this quantity ·540 inch fell on the 12th and ·420 inch on the 20th.

From January 1st to December 31st, 1893, rain fell at Knockdolian, Greystones, on 170 days, and to the total amount of 22·526 inches.

At Cloneevin, Killiney, Co. Dublin, 2·04 inches of rain fell during December on 20 days. The maximal fall in 24 hours being ·29 inch on the 19th. The average rainfall for December at this station is 2·117 inches on 15 days.

From January 1st to December 31st, 1893, rain fell at Cloneevin, Killiney, on 176 days to the total amount of 18·05 inches.

For Remarks on the Rainfall in 1893 *and Abstracts of Meteorological Observations*, 1873–93, *see pages* 184–8.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, AND DEATHS.

1893.

ABSTRACT OF MARRIAGES.—Marriages *registered* in Ireland, pursuant to the

	PROVINCES AND COUNTIES.	Area in Statute Acres, exclusive of the larger Rivers, Lakes, and Tideways.	Population, 1891.	TOTAL MARRIAGES.	MARRIAGES Registered under the Act 7 & 8 Vic., c. 81. According to the Rites of the Church of Ireland. Special Licence.	Licence.	Banns.	Registrar's Certificate.	Not stated by which of the foregoing Forms.	TOTAL.	In Registered Presbyterian Meeting Houses.	In Registered Buildings.	In the Registrar's Office.	Society of Friends.	Jews.	TOTAL Registered under the Act 7 & 8 Vic., c. 81.	Roman Catholic Marriages, Registered under the 26 & 27 Vic., c. 90.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1893.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1893.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead o exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.				
							Males.	Females.	Males.	Females.	Males.	Females.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

* On the 1st July, 1893, the Registrars' Districts of Belfast Nos. 3, 9, and 10 were sub-divided, and the boundaries thereof altered so as to form four Registrars' Districts, styled Belfast Nos. 3, 9, 10, and 11 respectively, and on the same day the Registrar's District of Castlereagh No. 1 (see page 88) was sub-divided into the Districts of Castlereagh Nos. 1 and 4. The numbers of Births and Deaths given in this Abstract for the Districts of Belfast No. 11 and Castlereagh No. 4 are those for the second half of the year only, and those entered for Belfast Nos. 3, 9, and 10, and Castlereagh No. 1, include all the Births and Deaths registered during the first half of the year in those Districts as then constituted.

The rainfall was 7·203 inches in defect of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It will be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, in 1884, when the measurement was 20·467 inches, and in 1893 with its rainfall of 20·493 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches, and in 1885 it was 26·614 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1893, there were 174 rainy days, or days upon which not less than ·01 inch of rain (one hundredth of an inch) was measured. This was considerably in defect of the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868—the warm dry year of recent times—as well as in 1887, the rainy days were only 160, and in 1870 they were only 145. In 1868, however, the rainfall amounted to 24·935 inches, or more than 8 inches above the measurement in 1887, and even in 1870, 20·859 inches were recorded.

The rainfall in 24 hours from 9 a.m. to 9 a.m. exceeded one inch on two occasions in 1892—viz., May 28th (2·056 inches), and August 16th (1·310 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin, the maximal daily measurements were ·871 inch on July 12th, and ·821 inch on November 16th.

Included in the 174 rainy days in 1893 are 17 on which snow or sleet fell, and 21 on which there was hail. In January hail was observed on 4 days, in February on 6 days, in March on 2 days, in April, August, and October on 1 day, in November on 5 days, and on one day in December. Snow or sleet fell on 4 days in January, on 7 days in February, on 2 days in March, on 4 days in November, and on not one occasion in December. Thunder occurred on ten occasions during the year—three times in May, twice in July and August, and once in June, September, and December. Lightning was also seen on four occasions in October, twice in August and September, and once in February and December.

The rainfall was distributed as follows:—5·196 inches fell on 49 days in the first quarter, 4·428 inches on 29 days in the second, 5·484 inches on 44 days in the third, and 5·385 inches on 52 days in the fourth and last quarter.

The rainfall in the first six months was 9·624 inches, on 78 days—that is, not one-half of the year's record. In February the rainfall was 2·669 inches on 22 days, in August 2·713 inches fell on 16 days, and in December 2·482 inches on 19 days.

Of the 5·385 inches which fell in the fourth quarter of the year, only 1·033 inches were measured in October on 16 days, and 1·870 inches in November on 17 days. In December the rainfall was both considerable and frequent.

Aurora borealis was observed on three occasions—namely, on February 16th, September 1st, and October 29th. More or less fog prevailed on 38 occasions—4 in January, 3 in February, 8 in March, 2 in April, 3 in August, September, and October, respectively; 5 in November, and 7 in December. The March fogs were very dry. High winds were noted on 130 days—18 in January, 11 in February and March, respectively; 4 in April and May, respectively; 7 in June, 9 in July, 10 in August, 14 in September, 10 in October, 15 in November, and 17 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 24 occasions—4 in January and February, respectively; 1 in March and June, respectively; 3 in August, 2 in October, 4 in November, and 5 in December.

Rainfall at Killiney, Co. Dublin, in 1893.

Mr. Robert O'Brien Furlong, M.A., Univ. Dubl., reports that rain fell in 1893, at his residence, Cloneevin, Killiney, Co. Dublin, on 176 days to the total amount of 18·05 inches. The average figures for eight years were 25·518 inches on 174·35 days. In 1887—the Jubilee year—the rainfall at this station was only 17·64 inches on but 148 days. In that year 1·05 inches fell on one day. The maximal fall on any one day in 1893 was only ·63 inch on April 16. Periods of absolute drought—14 days without rain—occurred from April 1 to 14 and from June 7 to 21. From March 19 to April 14 only ·02 inch fell.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is:—+ ·058.

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872–93—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81 and 1882–91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods.	Sexes.	Ages—Years.														Total.

* In 3,838 instances the age was not stated in the Returns for 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 1881 in 2,996 instances, viz., 1,765 males, and 1,231 females; and in 1891 in 1,786 instances, viz., 852 males, and 934 females.

INDEX TO SUPERINTENDENT REGISTRARS' DISTRICTS.

[The following Index furnishes a reference to the *Number* or *Numbers* of each Superintendent Registrar's District in the Tables of Abstracts contained in the Report, in which the numbers run consecutively from 1 to 232.]*

A.

Abbeyleix, . . . 45
Antrim, . . . 127
Ardee, . . . 33, 36
Armagh, . . . 136, 185
Athlone, . . . 51, 221
Athy, . . . 12, 46

B.

Bailieborough, . . 142
Ballina, . . . 212, 228
Ballinasloe, . . 194, 222
Ballinrobe, . . 195, 213
Ballycastle, . . 128
Ballymahon, . . 30, 52
Ballymena, . . 129
Ballymoney, . . 130, 173
Ballyshannon, . . 150, 168, 207
Ballyvaghan, . . 67
Balrothery, . . 6
Baltinglass, . . 1, 13, 62
Banbridge, . . 137, 160
Bandon, . . . 76
Bantry, . . . 77
Bawnboy, . . . 143, 208
Belfast, . . . 131, 161
Belmullet, . . . 214
Borrisokane, . . 108
Boyle, . . . 223, 229

C.

Cahersiveen, . . 94
Callan, . . 17, 109
Carlow, . . . 2, 47
Carrickmacross, . . 178
Carrick-on-Shannon, . 209, 224
Carrick-on-Suir, . 18, 110, 120
Cashel, . . . 111
Castlebar, . . . 215
Castleblayney, . . 138, 179
Castlecomer, . . 19
Castlederg, . . 186
Castlereagh, . . 216, 225
Castletown, . . 78
Cavan, . . . 144
Celbridge, . . . 7, 14, 37
Claremorris, . . 217
Clifden, . . . 196
Clogheen, . . . 112
Clogher, . . . 180, 187
Clonakilty, . . 79
Clones, ... 169, 181
Clonmel, . . . 113, 121
Coleraine, . . . 132, 174
Cookstown, . . . 188
Cootehill, . . . 145, 182
Cork, ... 80
Corrofin, . . . 68
Croom, ... 100

D.

Delvin, ... 53
Dingle, ... 95
Donegal, . . . 151
Downpatrick, . . 162
Drogheda, . . . 34, 38
Dromore West, . . 230
Dublin, North, . . 8
Dublin, South, . . 9
Dundalk, . . . 35, 139, 183
Dunfanaghy, . . 152
Dungannon, . . . 189
Dungarvan, . . . 122
Dunmanway, . . 81
Dunshaughlin, . . 10, 39

E.

Edenderry, . . . 15, 25, 40
Ennis, ... 69
Enniscorthy, . . . 3, 57
Enniskillen, . . . 146, 170, 190
Ennistimon, . . . 70

F.

Fermoy, ... 82

G.

Galway, . . . 197
Glennamaddy, . . 198
Glenties, . . . 153
Gorey, ... 58
Gort, ... 199
Granard, . . . 31, 54, 147

I.

Inishowen, . . . 154
Irvinestown, . . . 171, 191

K.

Kanturk, . . . 83
Kells, ... 41, 148
Kenmare, . . . 96
Kilkeel, . . . 163
Kilkenny, . . . 20
Killadysert, . . . 71
Killala, ... 218
Killarney, . . . 97
Kilmacthomas, . . 123
Kilmallock, . . . 84, 101
Kilrush, . . . 72
Kinsale, . . . 85

L.

Larne, ... 133
Letterkenny, . . . 155
Limavady, . . . 175
Limerick, . . . 73, 102
Lisburn, . . . 134, 164
Lismore, . . . 124
Lisnaskea, . . . 172
Listowel, . . . 98, 103
Londonderry, . . 156, 176
Longford, . . . 32
Loughrea, . . . 200
Lurgan, ... 135, 140, 165

M.

Macroom, . . . 86
Magherafelt, . . . 177
Mallow, . . . 87
Manorhamilton, . . 210
Middleton, . . . 88
Millford, . . . 157
Millstreet, . . . 89
Mitchelstown, . . 90, 104
Mohill, . . . 211
Monaghan, . . . 184
Mountbellew, . . 201
Mountmellick, . . 26, 48
Mullingar, . . . 55

N.

Naas, ... 16, 63
Navan, ... 42
Nenagh, . . . 114
Newcastle, . . . 105
New Ross, . . . 4, 21, 59
Newry, . . . 141, 166
Newtownards, . . 167

O.

Oldcastle, . . . 43, 149
Omagh, . . . 192
Oughterard, . . 202

P.

Parsonstown, . . 27, 115
Portumna, . . 203

R.

Rathdown, . . . 11, 64
Rathdrum, . . 65
Rathkeale, . . 106
Roscommon, . . 204, 226
Roscrea, . . . 28, 49, 116

S

Scarriff, . . . 74, 205
Shillelagh, . . . 5, 60, 66
Skibbereen, . . 91
Skull, ... 92
Sligo, ... 231
Strabane, . . . 158, 193
Stranorlar, . . . 159
Strokestown, . . 227

Urlingford, . . 23, 50, 119

W.

Waterford, . . 24, 125
Westport, . . . 220
Wexford, . . . 61

Y.

Youghal . . . 93, 126

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 45 (*see* page 50), and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page or pages in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

REPORT on the ADMINISTRATION of the LEGAL WORK of the GENERAL REGISTER OFFICE, DUBLIN, for the Financial Year 1893–94.

SIR,—I beg to report that the legal work of your Department during the year 1893–94 was administered as follows:—

Inclusive of a large number of cases, in which it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed, 670 offences against the Registration Acts were reported by Local Officers, and came under investigation in this Department during the year. In many of these the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation.

After careful inquiry into the circumstances and examination of the evidence available, in 190 cases prosecutions were directed against the offenders. In 103 of these the parties were convicted and punished; in 81 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law, and in 6 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of Coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness previous to death; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish certificate of cause of death; neglect of Registrar to furnish certified copies of entries in his Register Books; burying two bodies in one coffin without due notice.

The following are the details in a few of these cases:—

J. A. O'F., a Medical Practitioner, was prosecuted for neglecting to give to the informant a medical certificate of the cause of death. He was convicted and fined 10*s.* and £1 costs.

M. R. was prosecuted at Markethill Petty Sessions for falsely stating, when registering a death, that he was present thereat, and for wilfully understating the age for fraudulent purposes in connection with an insurance on the life of deceased. He was convicted, and fined 40*s.* and 20*s.* costs, or one month's imprisonment with hard labour.

A. J. was prosecuted at Donemana Petty Sessions for neglecting to register the birth of his child. He was convicted and fined £1, including costs.

J. B. was prosecuted at Garvagh Petty Sessions for making a false declaration with the view of having an illegitimate birth registered as legitimate. He was convicted and fined £2 10*s.* and £1 costs.

T. F., an undertaker, was prosecuted for burying the bodies of a mother and her stillborn child in the same coffin, without giving due notice in writing as required by the Registration Act, 1880. He was convicted and fined 5*s.* and £1 costs.

L. P. was prosecuted at Tinahely Petty Sessions for giving false information when registering the death of his father, by wilfully understating the age for fraudulent purposes in connection with insurance. He was convicted, and fined 30*s.* and costs or one month's imprisonment.

J. M. was prosecuted at Moira Petty Sessions for neglecting to register a death. He was convicted and fined 10*s.* and costs.

B. A. McG., a Registrar, was prosecuted for neglecting to duly furnish certified copies of the entries in his Register Books. The defendant had to pay costs amounting to £2 10*s.* 4*d.*

B. G. was prosecuted at Arklow Petty Sessions for giving false information when registering a death, by wilfully understating the age, for fraudulent purposes connected with insurance. She was convicted and fined £1 1*s.*

M. McN. was prosecuted at the Belfast Police Court for registering an illegitimate birth as legitimate. She was convicted and fined £1 with 12*s.* 6*d.* costs.

J. McC. was prosecuted at the Metropolitan Police Courts for burying the bodies of two of his children in one coffin, without giving due notice thereof in writing. He was convicted and fined 10*s.*

Notwithstanding the vigorous measures adopted by the Department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

It sometimes happens, however, that the informant overlooks the fact that the age in the register is to correspond with the age in the policy, and, in order to obtain the money, another nefarious proceeding is then necessary, viz., the making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

The greatest pains have been taken to obtain evidence in these cases to convict the offenders, but in many of them, I regret to state, for want of documentary proof of age, the case had to be abandoned, though no reasonable doubt existed that the offence had been committed.

The absence of reliable records of birth or baptism in the case of old persons, makes it exceedingly difficult to deal with them. In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register has been proved to be impossible from the records of the births or baptisms of the children of the deceased.

The Department is greatly indebted to the Inspector-General of the Royal Irish Constabulary and the Commissioner of Metropolitan Police for their kind assistance in investigating these numerous and varied criminal cases.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £93 15*s.* 1*d.*, of which sum £56 16*s.* 10*d.* was paid for local professional assistance and £23 2*s.* for mileage to the Registrars.

I am, Sir,

Your obedient servant,

R. E. Matheson,
Barrister-at-Law.

Thomas W. Grimshaw, Esq., M.D.,
Registrar-General.

9

DUBLIN CASTLE,

6th October, 1894.

SIR,

I have to acknowledge the receipt of your letter of the 5th instant, forwarding, for submission to His Excellency the Lord Lieutenant, copy of your Annual Report on Marriages, Births, and Deaths registered in Ireland in the year 1893.

I am,

Sir,

Your obedient Servant,

W. S. B. KAYE

The Registrar-General,

Charlemont House,

Rutland Square.
